1 Project Description

1.1 Introduction

This report details the analysis of potential air quality and greenhouse gas (GHG) impacts of The Metropolitan Water District of Southern California's (Metropolitan) proposed Garvey Reservoir Rehabilitation Project (herein referred to as "Project" or "proposed Project") in Monterey Park, California. Rincon Consultants, Inc. (Rincon) prepared this study under contract to Metropolitan. The purpose of this study is to analyze the Project's air quality and GHG impacts related to both temporary construction activity and long-term operation of the Project.

1.2 Project Summary

Project Location

The Project site is an approximately 142-acre property located at 1061 South Orange Avenue in Monterey Park, California (Assessor's Parcel Numbers 5260-013-910 and 5260-013-905). The Project site is owned by Metropolitan and is developed with the Garvey Reservoir in the central portion of the site along with appurtenant structures and features, including the Administration Building, Water Quality Laboratory, standby generator, sodium hypochlorite tank farm, and junction structure located in the paved yard on the eastern-central portion of the Project site; a surge tank located immediately south of the reservoir; a construction trailer and paved parking area immediately south of the reservoir; an unpaved construction staging area located immediately northwest of the reservoir; a communications tower and paved parking lot southeast of the reservoir; and paved roadways, power lines, mature trees, and landscaping throughout the Project site. The Project site is secured by chain-link perimeter fencing. The site is regionally accessible from State Route 60, located approximately 0.9 mile south of the Project site and Interstate 10, located approximately 1.4 miles north of the Project site. Local access to the Project site is provided by South Orange Avenue, and the Project site has three driveways at the paved yard along South Orange Avenue immediately north of its intersection with Tegner Drive. The Project site is surrounded by residential neighborhoods to the west, north, south, and east; Hillcrest Elementary School to the east; the Monterey Park City Yard to the north; and Garvey Ranch Park (located on Metropolitan fee property and easement) to the north. Figure 1 shows the Project site in a regional context, and Figure 2 shows the Project site in a local context. Figure 3 shows the location of existing and proposed site facilities.

Project Description

The proposed Project consists of several rehabilitation components and one new component, each of which is described in detail in the following subsections. The location of each Project component is shown in Figure 3.

Reservoir Cover and Liner

The Garvey Reservoir floating cover is a weight-tensioned type cover that is approximately 1,900,000 square feet in size. A series of weights and floats are placed on top of the cover. Sand-

filled weight tubes create troughs that serve as rainwater collection channels. In addition, the floating cover is equipped with 13 rainwater removal pumps. The proposed Project includes the following items related to the reservoir cover and liner:

- Redesign of the inlet/outlet (I/O) tower float assembly;
- Replacement of the polypropylene liner and disposal of the existing liner material;
- Inspection of the reservoir drainage system underneath the liner (including the underlying geo-textile cushion, underdrain, and circulation piping) and peripheral piping and repair or upgrade of the system and piping, if needed;
- Upgrade of the leak detection and monitoring system;
- Installation of a new floating cover;
- Completion of start-up testing procedures including cover inflation, chlorination, emergency dewatering, and instrument testing.

I/O Tower Seismic Upgrades

Garvey Reservoir is equipped with an I/O tower located at the east end of the reservoir. The I/O tower was originally designed for control flexibility, and water flows in or out of the reservoir at various elevations of the I/O tower by the operation of gates located at different elevations. The proposed Project includes seismic rehabilitation of the I/O tower and access bridge. Equipment within the I/O tower and lighting fixtures along the access bridge would also likely be upgraded and replaced. In addition, whether or not the fixtures along the access bridge are replaced, LED lights would be installed in the fixtures.

Junction Structure

The existing junction structure is located to the east of the Administration Building, directly adjacent to South Orange Avenue. The majority of the junction structure is located underground in a subterranean vault with only the roof and access stairway visible at street-level. The functions of the junction structure are essential to water distribution within the Central Pool through the Middle Feeder. The proposed Project includes replacement of five valves in the junction structure to improve reliability.

The timing of implementation of this Project component is contingent on several factors, such as:

1. The reservoir and junction structure cannot be out of service at the same time;
2. The pipelines within the junction structure cannot all be out of service at the same time; and
3. Upstream and downstream pipelines of the junction structure, such as those distributing water from the Robert B. Diemer and/or Joseph Jensen Water Treatment Plants, must be in service to accommodate a partial junction structure shutdown.

Facility Electrical System

The facility electrical system, which includes instrumentation at the Project site, is aged and outdated, which presents maintenance challenges in that some replacement parts are no longer carried by manufacturers. In addition to an aging electrical system, upgrade and/or redesign of the existing electrical system is needed to provide consistent power sources (240-volt to 480-volt) and to replace relays at the switchgear unit, the control panel, and other items. Most of the proposed electrical system work would be located underground between the Administration Building/Water Quality Laboratory and the sodium hypochlorite tank farm.

Standby Generator

The existing standby generator and its appurtenant electrical system, including transfer switches and the switchgear unit, are over 30 years old and have exceeded their useful life. The Project includes replacement of these features along with upgrades to meet current emission and fire codes under the United States Environmental Protection Agency's Emission and Fuel Standards Program. The new generator would likely be larger than the existing generator. The existing concrete block building housing the generator would be demolished. The new generator would either be in the open air under a canopy structure or would be in a new, enclosed building. The standby generator is located at ground level between the Administration Building/Water Quality Laboratory and the sodium hypochlorite tank farm.

Surge Tank Telemetry

An existing 1,000-gallon surge tank is part of the on-site domestic water system located at the top of the reservoir embankment, immediately south of the reservoir. The proposed Project includes improvements to the telemetry equipment connecting the surge tank to the pumps and would install a direct cable from the pumps in the junction structure to the surge tank pressure switch. The Project also includes upgrades to the pressure switches and automated tank controls.

Administration Building and Water Quality Laboratory Rehabilitation

The Administration Building and Water Quality Laboratory is located in the former chlorination building that was part of the original reservoir construction in the 1950s and later converted to its current functions. The proposed Project includes upgrades and rehabilitation of the interior of the water quality laboratory. The proposed laboratory improvements would enhance efficiency, reliability, and safety while providing a workspace that meets current best practice standards for laboratories to ensure compliance with United States Environmental Protection Agency and California Department of Public Health water quality regulations. The proposed Project includes the following:

- Design of a new interior plan layout for the entire building;
- Relocation of the existing Water Quality Laboratory to the Administration Building and vice versa;
- Relocation of the emergency eye wash station from outside the Administration Building to immediately adjacent to the Water Quality Laboratory;
- Provision of a new Americans with Disabilities Act-compliant parking stall with accessible path of travel to the building entrance;
- Modifications to the existing restroom for compliance with the 2010 Americans with Disabilities Act Standard for Accessible Design and 2019 California Building Codes (or most recent iteration in effect at the time);
- Reconstruction of a retaining wall on the south side of the building to prevent ponding and overflow from precipitation;
- Upgrades to the water heater and heating, ventilation, and air conditioning system; and
- Upgrades to enhance safety features.

Proposed Pump Station

The proposed Project includes the construction of a new pump station adjacent to South Orange Avenue to allow for better drought operating conditions, water quality, and flow range. The new pump station would be approximately 150 feet south of the junction structure and would house multiple pumps and valves to provide operational flexibility. The pump station would be built of concrete and masonry, approximately 500 square feet in size, and partially recessed about 10 feet into the hillside adjacent to South Orange Avenue. A subsurface valve tie-in to the Middle Feeder is also proposed and would be actuated when the pump station is utilized.

Miscellaneous Site Upgrades

Numerous, smaller site components may be repaired or rehabilitated as part of the proposed Project. These miscellaneous upgrades may include:

- Upgrades to the ammonia feed system;
- Repaving or repairing existing reservoir roads;
- Replacement of chain link fencing and gates within the property and along the perimeter;
- Improvements to the slopes behind the Administration Building and Water Quality Control Laboratory to reduce stormwater runoff flows;
- Drainage improvements, landscaping, tree trimming, and/or tree and vegetation removal;
- Replacement of security cameras and gate access/intercom; and
- Installation of security motion-activated lighting by the Administration Building and Water Quality Laboratory.

Construction Activities

Project construction activities would occur in three main phases. The first phase would involve work on the reservoir cover and liner and the I/O tower. The second phase would involve work on the junction structure. Other site work related to the facility electrical system, standby generator, surge tank telemetry, Administration Building, Water Quality Laboratory, and miscellaneous site upgrades would occur simultaneously during both Phases 1 and 2. Phase 3 would occur after Phases 1 and 2 are complete and would involve construction of the proposed pump station and ammonia feed system.

Construction of Phases 1 and 2 would occur between September 2025 and December 2027. Construction of Phase 3 would occur between January 2034 and June 2035. Construction activities would typically occur Monday through Friday, although work may be conducted on Saturdays as needed with the approval of Metropolitan staff. While the majority of construction would occur during daytime hours, occasional nighttime activities would be required during the construction period for Metropolitan staff conducting water quality testing and inspections as the reservoir fills up with water. These nighttime activities would not require the use of heavy-duty construction equipment.

Construction staging would occur at an existing, construction staging area located immediately northwest of the reservoir and an existing, partially paved construction trailer area immediately south of the reservoir (see Figure 3). Construction worker parking would primarily occur at the construction trailer area. If there are space limitations, the Project Contractor(s) would carpool workers to and from the Project site.

Prior to the start of work in the reservoir, water would be drained from the reservoir through the junction structure into the Middle Feeder. Any water below the intake at the I/O tower would be pumped out and drained through the existing v-ditches to the stormwater drainage system. All water discharged to the stormwater drainage system would be dechlorinated prior to discharge.

Replacement of the reservoir liner would not require substantial amounts of soil movement. The asphalt and clay layers located below the reservoir liner are expected to be recompacted, but would not be removed. Soil movement for the construction ramp into the reservoir would be needed. Approximately 5,000 cubic yards of total soil movement for the proposed Project is anticipated. Grading would also occur behind the Water Quality Laboratory Building to help control stormwater runoff behind the structure. The maximum depth of excavation would be 15 feet, which would be required for pump station construction.

Replacement of valves in the junction structure would occur after the reservoir has been emptied and re-filled. A crane would be used to replace the valves through the ground-level vault openings immediately east of the junction structure.

Construction of the pump station facility and ammonia feed system would occur after all other Project construction activities at the reservoir are complete.

Lead-based paints and coatings may be present on older mechanical features, such as the valves, epoxy, and I/O tower railings. Asbestos may also be present in some components to be removed or demolished. If lead-based paints and coatings are present, the Project Contractor(s) would comply with California Occupational Safety and Health Administration (CalOSHA) regulations, specifically California Code of Regulations Section 1532.1, which requires testing, monitoring, containment, and disposal of lead-based materials such that exposure levels do not exceed CalOSHA standards. If asbestos is present, the Project Contractor(s) would comply with South Coast Air Quality Management District (SCAQMD) Rule 1403 (Asbestos Emissions from Demolition/Renovation Activities), which requires that the owner or operator of any demolition or renovation activity have an asbestos survey performed prior to demolition.

Demolition would be required for portions of the standby generator structure, diesel fuel tank, emergency diesel generator, reservoir cover and liner, and related appurtenances. Project demolition would include removal of 400 square feet of the existing standby generator structure and fuel tank demolition; 160 square feet of asphalt paving for the new truck pad; 180 cubic feet of existing asphalt paving for the electrical conduit; 1.8 million square feet of the existing reservoir floating cover; 1,300 square feet of the Administration Building and Water Quality Laboratory interior; and 545 cubic feet of the existing hillside southeast of Administration Building and Water Quality Laboratory . For the existing reservoir liner, approximately 1.75 million square feet of the primary geomembrane liner, 1.75 million square feet of the composite drainage course, 1.75 million square feet of the secondary geomembrane liner, 1.1 million square feet of the non-woven geotextile cushion layer, and 1.1 million square feet of the geomembrane chafer would be removed and disposed of. The existing cover and liner materials would not require special disposal requirements and would be hauled to the nearest local landfill, approximately 20 miles from the Project site.

Operations and Maintenance Activities

Operations and maintenance activities at Garvey Reservoir, including the frequency of staff visits, monthly testing of the standby generator, and water usage in the Administration Building and Water Quality Laboratory would remain the same as existing conditions once construction activities

are completed. The proposed pump station would be an unmanned structure, and any operations or maintenance to the facility would be completed using existing Metropolitan staff. However, the proposed pump station would result in a net increase in electricity consumption of approximately 450,000 kilowatt-hours (kWh).

2 Air Quality Background and Regulations

2.1 Air Quality Background

Local Climate and Meteorology

California is divided geographically into 15 air basins for managing the air resources of the state on a regional basis. The Project site is located in Monterey Park, which is within the South Coast Air Basin (SCAB). The SCAB, which is regulated by the South Coast Air Quality Management District (SCAQMD), is bounded by the Pacific Ocean to the west and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The SCAB includes the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties, in addition to all of Orange County and the San Gorgonio Pass area in Riverside County. The regional climate in the SCAB is semi-arid and is characterized by warm summers, mild winters, infrequent seasonal rainfall, moderate daytime onshore breezes, and moderate humidity. The air quality within the SCAB is primarily influenced by meteorology and a wide range of emission sources, such as dense population centers, substantial vehicular traffic, and industry.

Criteria Air Pollutants

Air pollutants regulated by federal and state law are known as criteria air pollutants and are categorized either as primary pollutants or secondary pollutants. Primary air pollutants are those pollutants emitted directly from the various stationary and mobile sources, including carbon monoxide, volatile organic compounds (VOC), nitrogen oxide (NO_X), sulfur dioxide, respirable and fine particulate matter (particulate matter 10 microns or less in diameter [PM_{10}] and particulate matter 2.5 microns or less in diameter [$PM_{2.5}$], respectively), and lead. Of these, carbon monoxide, sulfur dioxide, PM_{10}, $PM_{2.5}$, and lead are primary criteria pollutants. VOCs and NO_X are precursors that form secondary criteria pollutants, such as ozone and nitrogen dioxide, through chemical and photochemical reactions in the atmosphere. Presented below is a description of each of the primary and secondary criteria air pollutants and their known health effects.

Ozone

Ozone is a highly oxidative unstable gas that is not directly emitted but rather forms in the atmosphere through a photochemical reaction between NO_X and VOC in the presence of sunlight (i.e., smog).[1] VOC is composed of non-methane hydrocarbons (with specific exclusions), and NO_X is composed of different chemical combinations of nitrogen and oxygen, mainly nitric oxide and nitrogen dioxide. NO_X is formed during the combustion of fuels, while VOC is formed during the combustion and evaporation of organic solvents. As a highly reactive molecule, ozone readily combines with many different atmosphere components. Consequently, high ozone levels tend to exist only while high VOC and NO_X levels are present to sustain the ozone formation process. Once the precursors have been depleted, ozone levels rapidly decline. Because these reactions occur on a regional rather than local scale, ozone is considered a regional pollutant. In addition, because

[1] The California Air Resources Board defines VOC and reactive organic gases similarly as, "any compound of carbon excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides or carbonates, and ammonium carbonate," (40 Code of Federal Regulations 51.100) with the exception that VOC are compounds that participate in atmospheric photochemical reactions. For the purposes of this analysis, reactive organic gases and VOC are considered comparable in terms of mass emissions, and the term VOC is used in this document to be consistent with SCAQMD's guidance.

ozone requires sunlight to form, it mainly occurs in concentrations considered serious between April and October. Groups most sensitive to ozone include children, the elderly, people with respiratory disorders, and people who exercise strenuously outdoors. Depending on the level of exposure, ozone can cause coughing and a sore or scratchy throat; make it more difficult to breathe deeply and vigorously and cause pain when taking a deep breath; inflame and damage the airways; increase the susceptibility of the lungs to infection; and aggravate lung diseases such as asthma, emphysema, and chronic bronchitis (USEPA 2023a and 2023b).

Carbon Monoxide

Carbon monoxide is a localized pollutant found in high concentrations only near its source. The primary source of carbon monoxide, a colorless, odorless, poisonous gas, is the incomplete combustion of petroleum fuels by automobiles. Therefore, elevated concentrations are usually only found near areas of high traffic volumes. Other sources of carbon monoxide include the incomplete combustion of petroleum fuels at power plants and fuel combustion from wood stoves and fireplaces during the winter. When carbon monoxide levels are elevated outdoors, they can be of particular concern for people with some types of heart disease. These people already have a reduced ability to supply oxygenated blood to their hearts in situations where they need more oxygen than usual. As a result, they are especially vulnerable to the effects of carbon monoxide when exercising or under increased stress. In these situations, short-term exposure to elevated carbon monoxide may result in reduced oxygen to the heart accompanied by chest pain (also known as angina) (USEPA 2023c).

Nitrogen Dioxide

Nitrogen dioxide is a by-product of fuel combustion and is primarily produced by motor vehicles, industrial boilers, and furnaces. Similar to ozone, nitrogen dioxide is not directly emitted but is formed through a reaction between nitric oxide (the principal form of NO_X produced by combustion) and atmospheric oxygen. Nitrogen dioxide is a reactive, oxidizing gas and an acute irritant capable of damaging cell linings in the respiratory tract. Breathing air with a high concentration of nitrogen dioxide can irritate airways in the human respiratory system. Such exposures over short periods can aggravate respiratory diseases leading to respiratory symptoms (such as coughing, wheezing, or difficulty breathing), hospital admissions, and visits to emergency rooms. Longer exposures to elevated concentrations of nitrogen dioxide may contribute to the development of asthma and potentially increase susceptibility to respiratory infections. People with asthma as well as children and the elderly are generally at greater risk for the health effects of nitrogen dioxide (USEPA 2023d). In addition to its health effects, NO_2 absorbs blue light and causes a reddish-brown cast to the atmosphere and reduced visibility. It can also contribute to the formation of ozone/smog and acid rain.

Sulfur Dioxide

Sulfur dioxide is included in a group of highly reactive gases known as “oxides of sulfur.” The largest sources of sulfur dioxide emissions are from fossil fuel combustion at power plants (73 percent) and other industrial facilities (20 percent). Smaller sources of sulfur dioxide emissions include industrial processes such as extracting metal from ore and burning fuels with a high sulfur content by locomotives, large ships, and off-road equipment. Short-term exposures to sulfur dioxide can harm the human respiratory system and make breathing difficult. People with asthma, particularly children, are sensitive to these effects of sulfur dioxide (USEPA 2024).

Particulate Matter

PM_{10} and $PM_{2.5}$ are comprised of finely divided solids and liquids such as dust, soot, aerosols, fumes, and mists. Both PM_{10} and $PM_{2.5}$ are emitted into the atmosphere as by-products of fuel combustion and wind erosion of soil and unpaved roads. The atmosphere, through chemical reactions, can form particulate matter. The characteristics, sources, and potential health effects of PM_{10} and $PM_{2.5}$ can be very different. PM_{10} is generally associated with dust mobilized by wind and vehicles. In contrast, $PM_{2.5}$ is generally associated with combustion processes and formation in the atmosphere as a secondary pollutant through chemical reactions. PM_{10} can cause increased respiratory disease, lung damage, cancer, premature death, reduced visibility, and surface soiling. For $PM_{2.5}$, short-term exposures (up to 24 hours in duration) to elevated concentrations have been associated with premature mortality, increased hospital admissions for heart or lung causes, acute and chronic bronchitis, asthma attacks, emergency room visits, respiratory symptoms, and restricted activity days. These adverse health effects have been reported primarily in infants, children, and older adults with preexisting heart or lung diseases (USEPA 2023e).

Lead

Lead is a metal found naturally in the environment as well as in manufacturing products. The major sources of lead emissions historically have been vehicles and industrial facilities. However, due to the USEPA's regulatory efforts to remove lead from gasoline, atmospheric lead concentrations have declined substantially over the past several decades. The most dramatic reductions in lead emissions occurred before 1990 due to the removal of lead from gasoline sold for most highway vehicles. Lead emissions were further reduced substantially between 1990 and 2008, with reductions occurring in the metals industries, at least partly due to national emissions standards for hazardous air pollutants (USEPA 2013). As a result of phasing out leaded gasoline, metal processing is currently the primary source of lead emissions. The highest lead level in the air is generally found near lead smelters. Other stationary sources include waste incinerators, utilities, and lead-acid battery manufacturers. Lead can adversely affect the nervous system, kidney function, immune system, reproductive and developmental systems, and cardiovascular system depending on exposure. Lead exposure also affects the oxygen-carrying capacity of the blood. The effects of lead most often encountered in current populations are neurological effects in children. Infants and young children are most susceptible to lead exposures, which can contribute to behavioral problems, learning deficits, and lowered intelligence quotient (USEPA 2023f).

Toxic Air Contaminants

In addition to the criteria air pollutants discussed above, toxic air contaminants (TAC) are a diverse group of airborne substances that may cause or contribute to an increase in deaths or serious illness, or that may pose a present or potential hazard to human health. TACs include both organic and inorganic chemical substances that may be emitted from a variety of common sources, including gasoline stations, motor vehicles, dry cleaners, industrial operations, painting operations, and research and teaching facilities. One of the main sources of TACs in California is diesel engine exhaust that contains solid material known as diesel particulate matter (DPM). More than 90 percent of DPM is less than one micron in diameter (about $1/70^{th}$ the diameter of a human hair) and thus is a subset of $PM_{2.5}$. Because of their extremely small size, these particles can be inhaled and eventually become trapped in the bronchial and alveolar regions of the lungs (CARB 2024). TACs may also be emitted from a variety of common sources, including gasoline stations, motor vehicles, dry cleaners, industrial operations, painting operations, and research and teaching facilities.

TACs are different than criteria pollutants because ambient air quality standards have not been established for TACs. TACs occurring at extremely low levels may still cause health effects, and it is typically difficult to identify levels of exposure that do not produce adverse health effects. TAC impacts are described by carcinogenic risk and by chronic (i.e., long duration) and acute (i.e., severe but of short duration) adverse effects on human health. For carcinogenic TACs, potential health impacts are evaluated in terms of overall relative risk expressed as excess cancer cases per one million exposed individuals. Non-carcinogenic TACs differ in that there is generally assumed to be a safe level of exposure below which no negative health impact is believed to occur. These levels are determined on a pollutant-by-pollutant basis. TACs may result in long-term health effects such as cancer, birth defects, neurological damage, asthma, or genetic damage, or short-term acute effects such as eye watering, respiratory irritation, runny nose, throat pain, and headaches (CARB 2024a).

Sensitive Receptors

The term "sensitive receptor" refers to either a person in the population who is more susceptible to health effects resulting from exposure to an air contaminant than the population at large or to a land use that may reasonably be associated with a concentration of such people (SCAQMD 2008a). CARB has identified the following groups most likely to be affected by air pollution: children, pregnant women, the elderly, and those with pre-existing serious health problems affected by air quality (CARB 2005). Examples of sensitive receptors identified in SCAQMD and CARB guidance documents include residences, schools, playgrounds, childcare centers, athletic facilities, long-term health care facilities (e.g., hospitals), rehabilitation centers, convalescent centers, and retirement homes. Sensitive receptors in the vicinity of the Project site include residential neighborhoods to the west, north, south, and east; Hillcrest Elementary School to the east across South Orange Avenue; and Garvey Ranch Park to the north.

2.2 Air Quality Regulations

Federal Air Quality Regulations

Federal Clean Air Act

The federal Clean Air Act (CAA) was enacted in 1970 and amended in 1977 and 1990 [42 United States Code 7401] for the purposes of protecting and enhancing the quality of the nation's air resources to benefit public health, welfare, and productivity.

The USEPA has set primary and secondary National Ambient Air Quality Standards (NAAQS) for ozone, carbon monoxide, nitrogen dioxide, sulfur dioxide, PM_{10}, $PM_{2.5}$, and lead. Ambient air quality standards represent the maximum levels of background pollution considered safe, with an adequate margin of safety, to protect the public health and welfare.[2] Table 1 lists the current NAAQS for criteria air pollutants.

[2] Primary standards are intended to protect public health, and secondary standards are intended to protect public welfare (e.g., visibility, animals, crops, vegetation, buildings.)

Table 1 Federal and State Ambient Air Quality Standards for Criteria Pollutants

Pollutant	Federal Standard (NAAQS)	California Standard (CAAQS)
Carbon Monoxide	35.0 ppm (1-hr avg) 9.0 ppm (8-hr avg)	20.0 ppm (1-hr avg) 9.0 ppm (8-hr avg)
Hydrogen Sulfide	No Federal Standards	0.03 ppm (1-hr avg)
Lead	0.15 μg/m^3 (rolling 3-month avg) 1.5 μg/m^3 (calendar quarter)	1.5 μg/m^3 (30-day avg)
Nitrogen Dioxide	0.100 ppm (1-hr avg) 0.053 ppm (annual avg)	0.18 ppm (1-hr avg) 0.030 ppm (annual avg)
Ozone	0.070 ppm (8-hr avg)	0.09 ppm (1-hr avg) 0.070 ppm (8-hr avg)
Particulate Matter (PM_{10})	150 μg/m^3 (24-hr avg)	50 μg/m^3 (24-hr avg) 20 μg/m^3 (annual arithmetic mean)
Particulate Matter ($PM_{2.5}$)	35 μg/m^3 (24-hr avg) 9 μg/m^3 (annual avg)	12 μg/m^3 (annual arithmetic mean)
Sulfates	No Federal Standards	25 μg/m^3 (24-hr avg)
Sulfur Dioxide	0.075 ppm (1-hr avg) 0.5 ppm (3-hr avg) 0.14 ppm (24-hr avg) 0.030 ppm (annual arithmetic mean)	0.25 ppm (1-hr avg) 0.04 ppm (24-hr avg)
Vinyl Chloride	No Federal Standards	0.01 ppm (24-hr avg)
Visibility-Reducing Particles	No Federal Standards	Visibility of ten miles or more (30 miles or more for Lake Tahoe) due to particles when relative humidity is less than 70 percent (8-hr avg)

NAAQS = National Ambient Air Quality Standards; CAAQS = California Ambient Air Quality Standards; ppm = parts per million; avg = average; μg/m^3 = micrograms per cubic meter

Source: CARB 2020

State Air Quality Regulations

California Clean Air Act

The California Clean Air Act was enacted in 1988 (California Health & Safety Code Section 39000 et seq.). Under the California Clean Air Act, the State has adopted the California Ambient Air Quality Standards (CAAQS), which are generally more stringent than the NAAQS. In addition to the federal criteria pollutants, the CAAQS also specify standards for visibility-reducing particles, sulfates, hydrogen sulfide, and vinyl chloride. While USEPA is the federal agency designated to administer air quality regulation, CARB, which became part of the California Environmental Protection Agency in 1991, is responsible for ensuring implementation of the California Clean Air Act. Table 1 above lists the current State standards for regulated pollutants.

Toxic Air Contaminants

In 1983, the California Legislature enacted a program to identify the health effects of TACs and to reduce exposure to these contaminants to protect the public health (Assembly Bill [AB] 1807: California Health and Safety Code Sections 39650–39674). The California Air Toxics Program

establishes the process for the identification and control of TACs and includes provisions to make the public aware of significant toxic exposures and for reducing risk.

Additionally, the Air Toxics "Hot Spots" Information and Assessment Act (AB 2588) was enacted in 1987 and requires stationary sources to report the types and quantities of certain substances routinely released into the air. The goals of the Air Toxics "Hot Spots" Act are to collect emissions data, identify facilities having localized impacts, ascertain health risks, notify nearby residents of significant risks, and reduce those significant risks to acceptable levels.

The Children's Environmental Health Protection Act (Senate Bill 25 of 1999) focuses on children's exposure to air pollutants. The act requires CARB to review its air quality standards from a children's health perspective, evaluate the statewide air quality monitoring network, and develop any additional air toxic control measures needed to protect children's health.

State Implementation Plan

The federal CAA Amendments of 1990 mandate that states submit and implement a State Implementation Plan (SIP) for areas not meeting air quality standards. The SIP is a collection of documents that set forth the state's strategies for achieving the NAAQS. In California, the SIP is a compilation of new and previously submitted plans, programs (such as monitoring, modeling, and permitting), district rules, state regulations, and federal controls. CARB is the lead agency for the SIP, and local air districts are responsible for preparing and implementing air quality attainment plans for pollutants for which each district is in non-attainment. These local air quality plans are then incorporated into the SIP. All of the items included in the California SIP are listed in 40 Code of Federal Regulations 52.220.

Local Air Quality Regulations

South Coast Air Quality Management District

SCAQMD attains and maintains air quality conditions in the SCAB through a comprehensive program of planning, regulation, enforcement, technical innovation, and promotion of the understanding of air quality issues. The clean air strategy of SCAQMD includes preparation of plans for attainment of ambient air quality standards, adoption and enforcement of rules and regulations concerning sources of air pollution, and issuance of permits for stationary sources of air pollution.

AIR QUALITY MANAGEMENT PLAN

To meet the NAAQS and CAAQS, SCAQMD has adopted a series of air quality management plans (AQMP) that serve as a regional blueprint to develop and implement an emission reduction strategy that will bring the area into attainment with the standards in a timely manner. The most significant air quality challenge in the SCAB is to reduce NO_X emissions to meet the 2037 ozone standard deadline for the non-Coachella Valley portion of the SCAB because NO_X plays a critical role in the creation of ozone. The 2022 AQMP includes strategies to ensure SCAQMD does its part to further the district's ability to meet the 2015 federal ozone standards. SCAQMD will need to reduce emissions of NO_X by 67 percent beyond what is required by adopted rules and regulations to meet the 2015 federal ozone standard. The 2022 AQMP builds on the measures already in place from the previous AQMPs and includes a variety of additional strategies such as regulation, accelerated deployment of available cleaner technology, best management practices, co-benefits from existing programs, incentives, and other Clean Air Act measures to meet the 8-hour ozone standard. Because NO_X emissions also lead to the formation of $PM_{2.5}$, the NO_X reductions needed to

meet the ozone standards will likewise lead to reduction of $PM_{2.5}$ levels and attainment of the annual $PM_{2.5}$ standards (SCAQMD 2022).

RULES AND REGULATIONS

SCAQMD has also adopted a set of rules and regulations pertaining to various emissions sources. All projects are subject to SCAQMD rules and regulations in effect at the time of construction. Rules applicable to the proposed Project include, but are not limited to, the following:

- **Rule 401: Visible Emissions.** This rule is intended to prevent the discharge of pollutant emissions from an emissions source that results in visible emissions.
- **Rule 402: Nuisance.** This rule is intended to prevent the discharge of pollutant emissions from an emissions source that results in a public nuisance.
- **Rule 403: Fugitive Dust.** This rule is intended to reduce the amount of particulate matter entrained in the ambient air as a result of anthropogenic (human-made) fugitive dust sources by requiring actions to prevent, reduce, or mitigate fugitive dust emissions.
- **Rule 1108 - Volatile Organic Compounds.** This rule governs the sale, use, and manufacturing of asphalt and limits the VOC content in asphalt used in the SCAB. This rule also regulates the VOC content of asphalt used during construction.
- **Rule 1113: Architectural Coatings.** The rule prohibits any person to apply or solicit the application of any architectural coating within the SCAQMD with VOC content in excess of the values specified in Rule 1113.
- **Rule 1143 – Paint Thinners and Solvents.** This rule governs the manufacture, sale, and use of paint thinners and solvents used in thinning coating materials, cleaning of coating application equipment, and other solvent cleaning operations by limiting their VOC content.
- **Rule 1186 – Fugitive Dust.** This rule limits the generation of fugitive dust on paved and unpaved roads. It sets certification protocols and requirements for street sweepers that are under contract to provide sweeping services to any federal, state, county, agency, or special districts such as water, air, sanitation, transit, or school district.
- **Rule 1110.2 – Emissions from Gaseous- and Liquid-Fueled Engines.** This rule limits the emissions of NO_X, VOC, and carbon monoxide from stationary and portable engines over 50 brake horsepower, including standby generators.
- **Rule 1401 – New Source Review of Toxic Air Contaminants.** This rule specifies limits for maximum individual cancer risk, cancer burden, and noncancer acute and chronic hazard index from new stationary sources that generate TAC emissions.
- **Rule 1470 – Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines**. This rule establishes operating standards for stationary diesel-fueled engines, including specific requirements for standby generators such as limits on non-emergency operation and particulate matter emission rates.

TOXIC AIR CONTAMINANTS

SCAQMD limits emissions and public exposure to TACs through a number of programs. Under SCAQMD Regulation XIV (Toxics and Other Non-Criteria Pollutants), and in particular Rule 1401 (New Source Review), all sources with the potential to emit TACs are required to obtain permits from SCAQMD. Permits may be granted to these operations if they are constructed and operated in accordance with applicable regulations, including new source review standards and air toxics

control measures. SCAQMD prioritizes TAC-emitting stationary sources based on the quantity and toxicity of the TAC emissions and the proximity of the facilities to sensitive receptors.

2.3 Existing Regional and Local Air Quality

SCAQMD operates a network of air quality monitoring stations throughout the SCAB. The purpose of the monitoring stations is to measure ambient concentrations of pollutants and determine whether ambient air quality meets the NAAQS and CAAQS. The monitoring station located closest to the Project site is the Pico Rivera-4144 San Gabriel station located at 4144 San Gabriel River Parkway in Pico Rivera in Source Receptor Area (SRA) 11. This monitoring station measures ozone, carbon monoxide, nitrogen dioxide, and $PM_{2.5}$. The closest monitoring station to the Project site that monitors for PM_{10} and sulfur dioxide is the Los Angeles-North Main Street station at 1630 North Main Street in Los Angeles in SRA 2 (Northwest Coastal LA County). Table 2 reports ambient air quality measurements and indicates the number of days that each standard has been exceeded between 2020 and 2022.[3]

Table 2 Ambient Air Quality at Nearest Monitoring Stations (2020 – 2022)

Pollutant	2020	2021	2022
Carbon Monoxide (ppm), Highest 8-Hour Average[1]	1.7	1.5	1.5
Number of days above State or Federal standard (>9.0 ppm)	0	0	0
Nitrogen Dioxide (ppm) - Worst Hour (Federal Measurements)[1]	0.069	0.072	0.065
Number of days above State standard (>0.18 ppm)	0	0	0
Number of days above Federal standard (0.10 ppm)	0	0	0
8 Hour Ozone (ppm), 8-Hour Average[1]	0.114	0.074	0.091
Number of days above Federal standards (>0.070 ppm)	23	3	2
Number of days above State (>0.070 ppm)	23	3	2
Ozone (ppm), Worst Hour[1]	0.169	0.104	0.123
Number of days above State standard (>0.09 ppm)	20	2	3
Particulate Matter <10 microns, μg/m^3, Worst 24 Hours[2]	83.7	34.0	61.0
Number of days above Federal standard (>150 μg/m^3)	0	0	0
Particulate Matter <2.5 microns, μg/m^3, Worst 24 Hours[1]	82.9	66.0	53.8
Number of days above Federal standard (>35 μg/m^3)	5	3	1
Sulfur Dioxide (ppm), Highest 1-Hour Average[2]	0.004	0.002	0.007
Number of days above State standard (>0.25 ppm)	0	0	0
Number of days above Federal standard (>0.075 ppm)	0	0	0

ppm = parts per million; μg/m^3 = micrograms per cubic meter
[1] Monitored at Pico Rivera-4144 San Gabriel station.
[2] Monitoring at Los Angeles-North Main Street station.
Notes: Monitoring data for federal and state standards may differ due to how standards are calculated. Ambient air quality monitoring data for hydrogen sulfide, sulfates, and vinyl chloride are not readily available in the South Coast Air Basin and are therefore not reported in this table.
Source: CARB 2024b and USEPA 2024

[3] Draft ambient air quality monitoring data is available for year 2023; however, this data had not been finalized by CARB as of the date of this report.

The federal and California Clean Air Acts use measured ambient air quality monitoring data to classify specific geographic areas (typically air basins) as either "attainment" or "nonattainment" for each pollutant. If an air basin is not in attainment for a criteria pollutant under the NAAQS or CAAQS, the air basin is classified as a nonattainment area for that pollutant. Under the federal CAA, once a nonattainment area has achieved the air quality standards for a criteria pollutant, it may be re-designated to an attainment area for that pollutant. To be re-designated, the area must meet air quality standards and have a 10-year plan for continuing to meet and maintain air quality standards, as well as satisfy other requirements of the federal CAA. Areas that have been re-designated to attainment are called maintenance areas. The SCAB is designated non-attainment (extreme) for 8-hour ozone NAAQS and non-attainment (serious) for the $PM_{2.5}$ NAAQS as well as partial non-attainment for lead for near-source monitors in Los Angeles County. The SCAB is also designated non-attainment for the ozone, PM_{10}, and $PM_{2.5}$ CAAQS (SCAQMD 2018a). The SCAB is designated unclassifiable or in maintenance/attainment for all other federal and State standards.

With regard to TACs, the Multiple Air Toxics Exposure Study (MATES) V completed by SCAQMD indicates 67 percent of overall cancer risk from TACs is attributed to DPM in the SCAB, and the immediate region around the Project site has an estimated carcinogenic risk of 549 in a million (SCAQMD 2018b).

3 Greenhouse Gas Emissions Background and Regulations

3.1 Greenhouse Gas Emissions Background

Overview of Greenhouse Gas Emissions

Gases that trap heat in the atmosphere are known as greenhouse gases (GHGs). GHGs allow sunlight to enter the atmosphere but trap a portion of the outward-bound infrared radiation that warms the air. The process is similar to the effect greenhouses have in raising the internal temperature of the structure. Both natural processes and human activities emit GHGs. The accumulation of GHGs in the atmosphere regulates the Earth's temperature, but emissions from human activities (such as fossil fuel-based electricity production and the use of motor vehicles) have elevated the concentration of GHGs in the atmosphere. Scientists agree this accumulation of GHGs has contributed to an increase in the temperature of the Earth's atmosphere and to global climate change. Global climate change is a change in the average weather on Earth that can be measured by wind patterns, storms, precipitation, and temperature. Although there is disagreement as to the rate of global climate change and the extent of the impacts attributable to human activities, most scientists agree there is a direct link between increased GHG emissions and long-term global temperature increases.

The gases widely seen as the principal contributors to human-induced climate change include carbon dioxide (CO_2), methane, nitrous oxides, fluorinated gases such as hydrofluorocarbons and perfluorocarbons, and sulfur hexafluoride. Water vapor is excluded from the list of GHGs because it is short-lived in the atmosphere, and natural processes, such as oceanic evaporation, largely determine its atmospheric concentrations.

GHGs are emitted by natural processes and human activities. Of these gases, CO_2 and methane are emitted in the greatest quantities from human activities. Emissions of CO_2 are usually by-products of fossil fuel combustion, and methane results from off-gassing associated with agricultural practices and landfills. Human-made GHGs, many of which have greater heat-absorption potential than CO_2, include fluorinated gases and sulfur hexafluoride.

Different types of GHGs have varying global warming potentials (GWP). The GWP of a GHG is the potential of a gas or aerosol to trap heat in the atmosphere over a specified timescale (generally 100 years) (USEPA 2023g). Because GHGs absorb different amounts of heat, a common reference gas (CO_2) is used to relate the amount of heat absorbed to the amount of the gas emitted, referred to as "carbon dioxide equivalent" (CO_2e), which is the amount of GHG emitted multiplied by its GWP. Carbon dioxide has a 100-year GWP of one. By contrast, methane has a GWP of 30, meaning its global warming effect is 30 times greater than CO_2 on a molecule per molecule basis (Intergovernmental Panel on Climate Change [IPCC] 2021).[4]

[4] The IPCC's (2021) *Sixth Assessment Report* determined that methane has a GWP of 30. However, the 2022 Climate Change Scoping Plan published by the CARB uses a GWP of 25 for methane, consistent with the Intergovernmental Panel on Climate Change's (2007) *Fourth Assessment Report*. Therefore, this analysis utilizes the GWPs from the Fourth Assessment Report.

Potential Effects of Climate Change

Globally, climate change has the potential to affect numerous environmental resources through impacts to future air temperatures and precipitation patterns. Scientific modeling predicts continued GHG emissions at or above current rates would induce more extreme climate changes during the 21st century than were observed during the 20th century. Each of the past three decades has been warmer than all the previous decades in the instrumental record, and the decade from 2000 through 2010 has been the warmest. The year 2023 was the warmest year since global records began in 1850 with observed global mean surface temperature (GMST) at approximately 1.2° Celsius (C) higher than the average GMST over the 20th century average (National Oceanic and Atmospheric Administration 2024). Furthermore, several independently-analyzed data records of global and regional Land-Surface Air Temperature (LSAT) obtained from station observations jointly indicate LSAT and sea surface temperatures have increased. Due to past and current activities, anthropogenic GHG emissions have increased global mean surface temperature at a rate of approximately 0.1°C per decade since 1900. In addition to these findings, there are identifiable signs that global warming is currently taking place, including substantial ice loss in the Arctic over the past two decades (IPCC 2023).

According to *California's Fourth Climate Change Assessment*, statewide temperatures from 1986 to 2016 were approximately 0.6 to 1.1°C higher than those recorded from 1901 to 1960. Potential impacts of climate change in California may include reduced water supply from snowpack, sea level rise, more extreme heat days per year, more large forest fires, and more drought years (State of California 2018). In addition to statewide projections, *California's Fourth Climate Change Assessment* includes regional reports that summarize climate impacts and adaptation solutions for nine regions of the state with regionally-specific climate change case studies (State of California 2018). However, while there is growing scientific consensus about the possible effects of climate change at a global and statewide level, current scientific modeling tools are unable to predict what local impacts may occur with a similar degree of accuracy.

3.2 Greenhouse Gas Regulations

Federal Greenhouse Gas Regulations

Federal Clean Air Act

The federal Clean Air Act (CAA) does not specifically regulate GHG emissions. However, the U.S. Supreme Court determined in *Massachusetts et al. v. Environmental Protection Agency et al.* ([2007] 549 U.S. 05-1120) that the USEPA has the authority to regulate motor-vehicle GHG emissions under the federal CAA. Currently, there are no federal regulations that set ambient standards for GHGs.

Final Rule to Revise Existing National GHG Emissions Standards for Passenger Cars and Light Trucks Through Model Year 2026

The USEPA finalized federal GHG emissions standards for passenger cars and light trucks for model years 2023 through 2026 in February 2022. These standards will leverage current and future technologies to result in the avoidance of more than three billion tons of GHGs through 2050.

State Greenhouse Gas Regulations

Statewide Greenhouse Gas Emission Reduction Targets

ASSEMBLY BILL 32 - CALIFORNIA GLOBAL WARMING SOLUTIONS ACT OF 2006

The "California Global Warming Solutions Act of 2006," (AB 32), outlines California's major legislative initiative for reducing GHG emissions. AB 32 codifies the statewide goal of reducing GHG emissions to 1990 levels by 2020 and requires CARB to prepare a Scoping Plan that outlines the main state strategies for reducing GHG emissions to meet the 2020 deadline. In addition, AB 32 requires CARB to adopt regulations to require reporting and verification of statewide GHG emissions. Based on this guidance, CARB approved a 1990 statewide GHG level and 2020 target of 431 MMT of CO_2e, which was achieved in 2016.

SENATE BILL 32

On September 8, 2016, the governor signed Senate Bill (SB) 32 into law, extending the California Global Warming Solutions Act of 2006 by requiring the state to further reduce GHG emissions to 40 percent below 1990 levels by 2030 (the other provisions of AB 32 remain unchanged). On December 14, 2017, the CARB adopted the 2017 Scoping Plan, which provides a framework for achieving the 2030 target. The 2017 Scoping Plan relies on the continuation and expansion of existing policies and regulations, such as the Cap-and-Trade Program, and implementation of adopted policies and legislation, such as SB 1383 and SB 100.

SENATE BILL 1383

Adopted in September 2016, SB 1383 requires CARB to approve and begin implementing a comprehensive strategy to reduce emissions of short-lived climate pollutants. SB 1383 requires the strategy to achieve the following reduction targets by 2030:

- Methane – 40 percent below 2013 levels
- Hydrofluorocarbons – 40 percent below 2013 levels
- Anthropogenic black carbon – 50 percent below 2013 levels

SB 1383 also requires the California Department of Resources Recycling and Recovery, in consultation with CARB, to adopt regulations that achieve specified targets for reducing organic waste in landfills.

ASSEMBLY BILL 1279

Signed into law in 2022, AB 1279 declares the policy of the State is both to achieve net zero GHG emissions as soon as possible, but no later than 2045, and maintain net negative GHG emissions thereafter and to ensure that by 2045, statewide anthropogenic GHG emissions are reduced to at least 85 percent below the 1990 levels.

2022 SCOPING PLAN

On December 15, 2022, CARB adopted the 2022 Scoping Plan, which sets a target of reducing emissions to 85 percent below 1990 levels by 2045 and outlines a technologically feasible, cost-effective, and equity-focused path to achieve carbon neutrality by 2045. As with previous scoping plans, the 2022 Scoping Plan does not provide project-level thresholds for land use development.

Instead, it recommends local governments implement climate strategies consistent with the 2022 Scoping Plan Appendix D: Local Actions (CARB 2022). The 2022 Scoping Plan also assesses the progress California is making toward reducing its GHG emissions by at least 40 percent below 1990 levels by 2030, as called for in SB 32 and laid out in the 2017 Scoping Plan.

Renewable Electricity

SENATE BILL 100 - CALIFORNIA RENEWABLES PORTFOLIO STANDARD PROGRAM

Adopted in September 2018, SB 100 supports the reduction of GHG emissions from the electricity sector by accelerating the state's Renewables Portfolio Standard (RPS) Program. SB 100 requires electricity providers to increase procurement from eligible renewable energy resources to 33 percent of total retail sales by 2020, 60 percent by 2030, and 100 percent by 2045.

SENATE BILL 1020

SB 1020, signed into law in September 2022, requires renewable energy and zero-carbon resources to supply 90 percent of all retail electricity sales by 2035, 95 percent by 2040, and 100 percent by 2045.

Vehicle Emissions Standards and Clean Vehicles

EXECUTIVE ORDER B-48-18 (ZERO-EMISSION VEHICLES)

In January 2018, Governor Brown signed Executive Order B-48-18 requiring all State entities to work with the private sector to have at least 5 million ZEVs on the road by 2030 as well as to install 200 hydrogen fueling stations and 250,000 electric vehicle (EV) charging stations by 2025.

EXECUTIVE ORDER N-79-20 (ZERO EMISSIONS VEHICLES SALES)

Governor Gavin Newsom signed Executive Order N-79-20 in September 2020, which sets a statewide goal that 100 percent of all new passenger car and truck sales in the state will be zero-emissions by 2035. It also sets a goal that 100 percent of statewide new sales of medium- and heavy-duty vehicles will be zero emissions by 2045, where feasible, and for all new sales of drayage trucks to be zero emissions by 2035. Additionally, the Executive Order targets 100 percent of new off-road vehicle sales in the state to be zero emission by 2035.

CALIFORNIA ADVANCED CLEAN TRUCKS REGULATION

In March 2021, CARB approved the Advanced Clean Trucks regulation, which requires manufacturers who certify Class 2b-8 chassis or complete vehicles with combustion engines to sell zero-emission trucks as an increasing percentage of their annual California sales from 2024 to 2035. In addition, the regulation requires company and fleet reporting for large employers and fleet owners with 50 or more trucks. By 2045, all new trucks sold in California must be zero-emission.

CALIFORNIA ADVANCED CLEAN FLEETS REGULATION

In April 2023, CARB approved the Advanced Clean Fleets regulation, which is part of California's strategy to accelerate the adoption of medium- and heavy-duty zero-emission vehicles (ZEV). It complements the Advanced Clean Trucks regulation and aims to achieve public health, air quality, and climate goals. The Advanced Clean Fleets regulation applies to fleets performing drayage operations; fleets owned by state, local, and federal government agencies; and high-priority fleets.

The Advanced Clean Fleets regulation includes several components, such as mandates for high-priority and government fleets to purchase increasing percentages of ZEVs over time.

CEQA Guidelines Requirements for Analysis and Reduction of GHG Emissions

CEQA Guidelines Section 15064.4(a) indicates public agencies should make a careful judgement in determining the significance of GHG emissions under CEQA. Public agencies shall make a good-faith effort, based to the extent possible on scientific and factual data, to describe, calculate, or estimate the amount of GHG emissions resulting from a project. A public agency shall have discretion to determine, in the context of a particular project, whether to quantify GHG emissions resulting from the project and/or rely on a qualitative analysis or performance-based standards.

Additionally, CEQA Guidelines Section 15064.4(b) states public agencies should focus GHG analysis on the reasonably foreseeable incremental contribution of the project's emissions to the effects of climate change when determining the significance of a project's GHG emissions. A project's incremental contribution may be cumulatively considerable even if it appears relatively small compared to statewide, national, or global emissions. A public agency's analysis should consider a timeframe that is appropriate for the project and also must reasonably reflect evolving scientific knowledge and state regulatory schemes.

CEQA Guidelines Section 15183.5(b) states public agencies may choose to analyze and mitigate significant GHG emissions in a plan for the reduction of GHG emissions or similar document, and such a plan may be used in a cumulative impacts analysis of GHG emissions. Pursuant to CEQA Guidelines 15183.5(b)(1), the plan for the reduction of GHG emissions should:

- Quantify GHG emissions, both existing and projected over a specified time period, resulting from activities within a defined geographic area;
- Establish a level, based on substantial evidence, below which the contribution to GHG emissions from activities covered by the plan would not be cumulatively considerable;
- Identify and analyze the GHG emissions resulting from specific actions or categories of actions anticipated within the geographic area;
- Specify measures or a group of measures, including performance standards, that substantial evidence demonstrates, if implemented on a project-by-project basis, would collectively achieve the specified emissions level;
- Establish a mechanism to monitor the plan's progress toward achieving the level and to require amendment if the plan is not achieving specified levels; and
- Be adopted in a public process following environmental review.

Consistent with CEQA Guidelines Sections 15064(h)(3) and 15130(d), CEQA Guidelines Section 15183.5(b)(2) states a plan for the reduction of GHG emissions, once adopted following certification of an EIR or adoption of an environmental document, may be used for later projects in the cumulative impacts analysis for GHG emissions. An environmental document that relies on a GHG reduction plan for a cumulative impacts analysis must identify those requirements specified in the plan that apply to the project, and, if those requirements are not otherwise binding and enforceable, incorporate those requirements as mitigation measures applicable to the project. If there is substantial evidence that the effects of a particular project may be cumulatively considerable, notwithstanding the project's compliance with the specified requirements in the plan for the reduction of GHG emissions, an EIR must be prepared for the project.

Regional and Local Regulations

South Coast Air Quality Management District

As a method for determining significance under CEQA, SCAQMD developed a draft tiered flowchart in 2008 for determining significance thresholds for GHGs for industrial projects where SCAQMD is acting as the lead agency. In December 2008, SCAQMD adopted a threshold of 10,000 MT of CO_2 per year for industrial facilities, but only with respect to projects where SCAQMD is the lead agency (SCAQMD 2008b). SCAQMD has not adopted a threshold for non-industrial projects at the time of this report. Although the SCAQMD has adopted a threshold for industrial facilities, this threshold is not used because SCAQMD is not the lead agency for the proposed Project under CEQA.

City of Monterey Park Climate Action Plan

The City of Monterey Park Climate Action Plan (CAP) includes a baseline (2009) GHG inventory for the city and sets forth a comprehensive strategy to address GHG emissions related to land use, transportation, building design, energy use, water demand, and waste generation with a 2020 reduction target (City of Monterey Park 2012). Because Metropolitan is an independent special district, its GHG emissions are not within the purview of the City of Monterey Park CAP; therefore, this plan is not applicable to the proposed Project and is not discussed further.

The Metropolitan Water District of Southern California Climate Action Plan

In May 2022, Metropolitan adopted a CAP and certified the associated Program EIR. The CAP sets targets for reducing GHG emissions from Metropolitan's operations, including the conveyance, storage, treatment, and delivery of water to its 26 member water agencies. The CAP informs policy and planning decisions and establishes a feasible and implementable way to reach its emissions reduction target. As outlined in Section 1.1 of Metropolitan's CAP, the CAP meets all the required elements of a qualified GHG emissions reduction plan and is in compliance with CEQA Guidelines Section 15183.5(b)(1) (described previously under *State Greenhouse Gas Regulations*).

Metropolitan used an emissions inventory and forecast to provide a basis for establishing targets for future GHG reductions. Metropolitan established a 2030 target of 40 percent below 1990 levels by 2030 for GHG emissions reduction to achieve consistency with SB 32 and a 2045 target of carbon neutrality consistent the recently signed AB 1279, which codifies the State's goal of achieving carbon neutrality by 2045 that was initially set forth in EO B-55-18. Metropolitan is tracking its GHG emissions annually using a carbon budget approach. The carbon budget is analogous to a tank with a set capacity, or a total mass emission cap, between emissions level in 2005 and carbon neutrality in 2045. All the emissions from Metropolitan's operations go into this tank each year. The total capacity of the tank is Metropolitan's total emissions budget, and over time that tank fills up. As long as Metropolitan produces fewer GHG emissions than can fit in the tank, the identified targets will be achieved regardless of emissions produced during any particular year. Metropolitan's total carbon budget was calculated in Section 4.3 of the CAP and is based on the total emissions that can be generated between 2005 and 2045 while still achieving Metropolitan's 2030 and 2045 GHG emissions reduction targets (Metropolitan 2022). Additionally, Metropolitan is committed to preparing annual CAP progress reports to track GHG emissions against the carbon budget as well as a CAP update every five years to achieve carbon neutrality by 2045.

The CAP includes a suite of 42 GHG emissions reduction measures that would reduce Metropolitan's GHG emissions and achieve carbon neutrality while also providing improved

infrastructure reliability, increased energy resiliency, and decreased costs associated with energy procurement and maintenance. GHG reduction measures included in the CAP include phasing out natural combustion, converting to a zero-emissions vehicle fleet, using alternative low-carbon intensity fuels, utilizing low-carbon and carbon-free electricity, improving energy efficiency, increasing waste diversion, and increasing water conservation and local water supplies (Metropolitan 2022).

4 Methodology and Significance Thresholds

4.1 Methodology

Criteria air pollutant and GHG emissions that would be generated by Project construction and operation were calculated using the California Emissions Estimator Model (CalEEMod), Version 2022.1.1.21. The methodology utilized to estimate emissions for the proposed Project is discussed below. Assumptions, calculations and CalEEMod output files for the Project are included in Appendix A of this report.

Construction Emissions

Project construction would primarily generate temporary criteria air pollutant and GHG emissions from construction equipment operation on site, construction worker vehicle trips to and from the site, and haul trips to transport materials, demolition debris, and soil export to and from the Project site. Construction input data for CalEEMod include but are not limited to: (1) the anticipated start and finish dates of construction activity; (2) inventories of construction equipment to be used; (3) areas to be excavated and graded; and (4) volumes of materials to be exported from and imported to the Project site.

The analysis assessed maximum daily emissions from individual construction activities, including demolition, site preparation, grading, infrastructure installation, building construction, paving, and coating applications. Based on information provided by Metropolitan, construction was modeled to start September 30, 2025 for Phases 1 and 2 and January 2034 for Phase 3 with completion anticipated in December 2027 for Phases 1 and 2 and June 2035 for Phase 3. Additional details on the anticipated construction schedule are outlined in Table 3.

Table 3 Construction Schedule

Project Component	Phase	Estimated Construction Schedule
Reservoir Cover/Liner	Phase 1	Demolition: 100 days Infrastructure Installation: 18 months Paving/Site Restoration: 3 months
I/O Tower	Phase 1	Infrastructure Installation: 9 months Paving/Site Restoration: 2 months
Junction Structure	Phase 2	Infrastructure Installation: 6 months
Facility Electrical System	Phases 1 and 2	Site Preparation: 3 months Grading: 1 month Infrastructure Installation: 6 months Paving/Site Restoration: 2 months
Standby Generator	Phases 1 and 2	Demolition: 2 months Site Preparation: 2 months Grading: 2 months Infrastructure Installation: 8 months Paving/Site Restoration: 3 months

Project Component	Phase	Estimated Construction Schedule
Surge Tank Telemetry	Phases 1 and 2	Infrastructure Installation: 2 months Paving/Site Restoration: 1 month
Administration Building/Water Quality Laboratory	Phases 1 and 2	Building Construction: 6 months Architectural Coating: 4 months
Miscellaneous Site Upgrades	Phases 1 and 2	Demolition: 3 months Site Preparation: 2 months Grading: 2 months Infrastructure Installation: 6 months Paving/Site Restoration: 3 months
Pump Station	Phase 3	Site Preparation: 3 months Grading: 2 months Infrastructure Installation: 12 months Paving/Site Restoration: 3 months Architectural Coating: 2 months

Construction emissions associated with development of the proposed Project were quantified using equipment lists provided by Metropolitan for each Project component, as summarized in Table 4.

Table 4 Construction Equipment List

Project Component	Construction Equipment
Reservoir Cover/Liner	Three generators, one rubber tired loader, three to four pressure washers, two rough terrain forklifts, one sweeper/scrubber.
I/O Tower	Two backhoes, one bore/drill rig, one compactor, three to five compressors, one to two cranes, one to two dozers, one to two excavators, five to ten small generators, one grader, one to two rubber tired loaders, one to two skid steer loaders.
Junction Structure	Two backhoes, three compressors, one crane, one excavator, three generators, one rubber tired loader, one paving equipment, one roller, one skid steer loader, one welder.
Facility Electrical System	Two aerial lifts, one backhoe, two compressors, one crane, one excavator, one forklift, three generators, one grader, one rubber tired loader, one paving equipment, two rollers, one skid steer loader.
Standby Generator	Two aerial lifts, one backhoe, two compressors, one crane, one excavator, one forklift, three generators, one grader, one rubber tired loader, one paving equipment, two rollers, one skid steer loader.
Surge Tank Telemetry	One backhoe, two compressors, one crane, one excavator, one forklift, three generators, one grader, one rubber tired loader, one paving equipment, two rollers, one skid steer loader.
Administration Building/Water Quality Laboratory	One backhoe, two compressors, one crane, one excavator, one forklift, three generators, one grader, one rubber tired loader, one paving equipment, two rollers, one skid steer loader.
Pump Station	One backhoe, one excavator, one forklift, three generators, one rubber tired loader, one skid steer loader.
Miscellaneous Site Upgrades	One backhoe, one dozer, one excavator, one forklift, three generators, one grader, one rubber tired loader, one paving equipment, two rollers, two skid steer loaders.

CalEEMod also estimates off-site emissions from worker, vendor, and hauling truck trips. The number of worker and vendor trips were based on CalEEMod defaults and Project-specific information provided by Metropolitan where available. Based on information provided by Metropolitan, it was conservatively assumed approximately 5,000 cubic yards of soil would be imported to the Project site to construct a temporary ramp into the reservoir during construction, approximately 640 cubic yards of concrete would be imported to the Project site for seismic upgrades to the I/O tower, and approximately 9.5 million square feet of demolition debris would be hauled off site. The default trip lengths were used for most construction trips, with the exception of delivery trips for the geomembrane liner and floating cover construction materials, which were assumed to be delivered from outside SCAQMD jurisdiction and would travel up to 220 miles to the site.[5] Based on the nature of proposed construction activities, the modeling assumed less than 10 acres would be disturbed by construction on any given day.

The quantity, duration, and the intensity of construction activity influences the amount of construction emissions and their related pollutant concentrations that occur at any one time. The emission forecasts modeled for this report reflect conservative assumptions where a relatively large amount of construction is occurring in a relatively intensive manner. If construction is delayed or occurs over a longer period, criteria pollutant emissions could be reduced because of (1) a more modern and cleaner-burning construction equipment fleet mix than assumed in CalEEMod and/or (2) a less intensive buildout schedule (total annual emissions occurring over a greater number of days).

For the GHG emissions analysis, SCAQMD recommends amortizing construction-related GHG emissions over a 30-year period in conjunction with the proposed Project's operational emissions (SCAQMD 2008b). Consistent with this guidance, total construction GHG emissions resulting from the proposed Project were amortized over 30 years and added to operational GHG emissions to account for their contribution to GHG emissions over the lifetime of the Project.

Operational Emissions

Operations and maintenance activities (e.g., frequency of staff visits, standby generator testing, water usage in Administration Building/Water Quality Laboratory) would remain the same as existing conditions under the proposed Project after completion of construction. Therefore, the analysis of operational emissions focuses on the estimated increase in annual electricity usage of 450,000 kWh due to operation of the new pump station. Pursuant to the CalEEMod User Guide, "because power plants are existing stationary sources permitted by air districts and/or the USEPA, criteria pollutant emissions are generally associated with the power plants themselves, and not individual buildings or electricity users. Additionally, criteria pollutant emissions from power plants are subject to local, state, and federal control measures, which can be considered the maximum feasible level of mitigation for stack emissions." Therefore, for the purposes of this analysis, air quality impacts from increased electricity usage are not evaluated. Quantification of annual GHG emissions associated with the increased electricity usage was conducted assuming electricity would

[5] The exact origin of the new cover material is currently unknown and will be determined when the Project contractor is selected. The new cover material could come from as close as San Diego or as far away as the East Coast. Emissions generated by transport trucks in other jurisdictions outside SCAQMD would be minimal and unlikely to exceed other air districts' thresholds because only one to two trips per day would occur. Therefore, air pollutant emissions generated outside SCAQMD boundaries are not considered in this analysis. As a conservative estimate of potential air pollutant emissions generated by transport truck trips within SCAQMD jurisdiction, the maximum distance that could be traveled to reach the SCAQMD boundary (220 miles one-way from the California-Arizona border to the project site) was used.

be supplied by Southern California Edison with a carbon intensity factor of approximately 532 pounds of CO_2e per megawatt hour.

Health Risk Assessment – Toxic Air Contaminants

Health impacts associated with TACs generally result from long-term exposure to sources such as industrial processes like petroleum refining, commercial operations like gasoline stations and dry cleaners, and diesel exhaust. The following subsections describe the methodologies utilized to evaluate health impacts associated with Project-related TAC emissions during construction and operation.

Construction-Related Toxic Air Contaminant Emissions

The use of large-scale, off-road diesel equipment during Project construction may result in a temporary and short-term exposure of nearby sensitive receptors to elevated concentrations of TAC emissions. DPM would be the TAC emitted in the largest quantity during construction and is the primary TAC of concern for purposes of this analysis. The health risk analysis conservatively evaluates a reasonable, worst-case scenario in which all construction activities in Phases 1 and 2 occur concurrently. (Although this represents a reasonable scenario for analysis, simultaneous construction activities for all Project components in Phases 1 and 2 would be very unlikely to occur.)

The magnitude of health risk impacts is based on the amount of excess health risk (i.e., the additional health risk created by a project above the existing background health risk) relative to an established threshold. Health effects from carcinogenic air toxics usually are described in terms of excess cancer risk. Non-carcinogenic health risks described as either chronic or acute effects and are assessed in terms of a hazard index. A hazard index is the potential for non-cancer health effects to occur as a result of exposure to TACs. Acute effects are due to short-term exposure, while chronic effects are due to long-term exposure to a substance. The hazard index is calculated as the summation of the hazard quotients for all TACs to which an individual would be exposed.

Air Dispersion Modeling

Dispersion modeling was performed using the USEPA-approved AERMOD dispersion model, version 18081, which is part of the Air Dispersion Modeling and Risk Tool version 21081 created by CARB. AERMOD is a steady-state, multiple-source, Gaussian dispersion model that uses site-specific meteorological data (wind vector, wind speed, temperature, stability class, and mixing height) and elevations along with specific emission source locations to approximate how air pollutants would be dispersed from construction activities. Emission sources (i.e., construction activities) were added to the model at the various locations within the Project site where construction activities would occur.

AERMOD requires input of meteorological and topographic data. For this analysis, pre-processed meteorological data was obtained from the nearest SCAQMD monitoring station with available AERMOD input data, which is the Pico Rivera station, which was pre-processed with AERMET version 18081. This meteorological station is approximately 17 miles northwest from the Project site. The meteorological dataset was developed by SCAQMD for use in AERMOD and includes five years of meteorological data between 2010 and 2016 (data from 2013 is not included). Consistent with SCAQMD's Modeling Guidance for AERMOD (SCAQMD 2024), AERMOD's Urban Dispersion option was applied using an estimated population of 9,818,605 for Los Angeles County. The ten-meter national elevation dataset for the Project site vicinity was also used in the model.

Emissions from each area of construction activity were calculated using values from the CalEEMod outputs (Appendix A). AERMOD includes a variety of source types, including point, volume, and volume line sources. In order to accurately characterize the emissions generated by construction activities at the Project site, area and volume line sources[6] were used to represent construction emissions sources. Based on the anticipated construction schedule, the average workday would be approximately 10 hours, and construction activities would typically occur five days per week. Therefore, DPM emissions were assumed to be limited to the hours of 7:00 a.m. to 5:00 p.m. every weekday. The model was run to obtain the maximum one-hour and average concentration across the construction period (October 2025 through June 2035 with construction activities occurring from September 2025 through December 2027 and starting up again in January 2034 and ending in June 2035).

Receptors identified for modeling were placed at the boundary of the Project site as well as at the locations of nearby residential and school land uses within 1,000 feet of the center of the Project site. Those receptors not specifically included in the model would be exposed to less risk than the risk modeled for those receptors included in the analysis due to increased dispersion of pollutants at distances greater than the 1,000-foot radius. The nearest receptor points to the Project site were spaced at 164 feet (50 meters) apart to provide a more detailed analysis of health risk impacts because these receptors would be exposed to the highest concentrations of air pollutants. All other modeled receptor points were spaced at 328 feet (100 meters) apart. For this analysis, school land uses were modeled as residential receptors, which represents a conservative analysis because exposure would be highest at residential receptors due to the extended duration of time people are present at their residences as compared to schools.

The total PM_{10} exhaust emissions for all on-site diesel equipment for the entire construction period were divided by the number of construction workdays to determine the maximum hourly emission rate. AERMOD was used to determine the non-pollutant specific concentration at receptor points by source using a unit emission rate of 1 g/sec-m^2. The non-pollutant specific concentration was then multiplied by the actual pollutant specific emission rates (i.e., annual average in pounds per year and maximum hourly in pounds per hour) to determine the cumulative source ground-level pollutant specific concentration (GLC) at each receptor.

The estimated concentrations are not a specific prediction of the actual concentrations that would occur at any one point or any specific time over the course of the construction period. Actual concentrations are dependent on many variables, particularly the number and type of equipment working at specific distances during time periods of adverse meteorology. While maximum daily emissions for each construction phase were used to quantify risk, the actual usage of the equipment may be substantially less than what was estimated due to the nature of construction activities and equipment needs. Additionally, because an exact schedule for construction activities is not known, it was conservatively assumed all construction activities started at the earliest anticipated date, thereby exposing the most sensitive of the receptors to the greatest amount of emissions.

[6] The volume line source type within AERMOD allows the user to input linear-type sources using start and end points of the line and width of the line, as compared to the area source type, which is more appropriate for rectangular sources. Both area and volume line sources are appropriate to use to represent construction emissions because construction equipment would be both stationary and mobile within the Project site rather than a single point.

Cancer Risk Analysis

The health risk calculations were based on the standardized equations contained in the current Air Toxics Hot Spots Program Risk Assessment Guidelines (OEHHA 2015) and guidelines from the SCAQMD's South Coast AQMD Modeling Guidance for AERMOD (SCAQMD 2024). Health risk impacts were evaluated based on DPM emissions generated during Project construction activities and the potential effects on nearby residents. Average concentrations of DPM at the most-exposed sensitive receptor were used to estimate potential carcinogenic health risk. Toxicity values for the pollutants of concern were obtained from the OEHHA Air Toxics Hot Spots Program Risk Assessment Guidelines and Inhalation RELs[7] (OEHHA 2015).

Health impacts are evaluated using a dose-response assessment, which describes the relationship between the level of exposure to a substance (i.e., the dose) and the incidence or occurrence of injury (i.e., the response). The applicable exposure pathways (e.g., inhalation) were identified for the emitted substances and the receptor locations in the model; these pathways determine the exposure algorithms used to estimate dose. After the exposure pathways are identified, the applicable fate and transport algorithms were used to estimate pollutant concentrations in the applicable exposure media (e.g., air), and the exposure algorithms were used to determine the substance-specific dose at each receptor. In accordance with the OEHHA (2015) guidance, the inhalation pathway was used in the model to evaluate impacts related to DPM generated during Project construction activities. For the inhalation pathway, the dose is directly proportional to the breathing rate.

Once dose was estimated for each receptor, cancer risk was calculated based on the cancer potency factor (CPF) of DPM, age sensitivity factor (ASF), exposure duration, averaging time for lifetime cancer risk, and fraction of time spent at home (FAH) (i.e., at the location of the sensitive receptor). The CPF is specific for each pollutant and is determined through peer-reviewed scientific studies. For example, use of a CPF for DPM of 3.0×10-4 $(\mu g/m^3)^{-1}$ and a slope factor of 1.1 $(\text{parts per million-day})^{-1}$ is recommended (OEHHA 2015).[8] The ASFs account for the greater susceptibility to the health impacts of TACs in early life as compared to adult exposure, starting from the third trimester of pregnancy to 16 years. The FAH considers the time actually spent at the sensitive receptor location for various age groups. For example, newborns are expected to reside at home for longer periods of time as compared to school-age children who spend several hours a day at school, and the elderly (e.g., retirees) are expected to spend more time at home compared to people of working age who spend several hours a day outside the home. To provide a conservative analysis, the high-end breathing rate (95^{th} percentile) by age bin was used, and no FAH adjustment was applied. To assess a reasonable worst-case scenario, it was assumed that an individual could be exposed to construction emissions while they are a third trimester fetus through a nine-year-old child with construction activities only occurring between the third trimester and two years of age, then at ages eight and nine. (Children are more affected by DPM emissions than adults because of the greater amount of air that they breathe on a daily basis compared to their body weight.) Health risk associated with construction of the pump station was also evaluated for a child from the third trimester through the age of two years because there would be a multi-year break between Phase 2 and Phase 3.

Chronic and carcinogenic health risk were further refined by age bin based on the USEPA (2005) guidance on the use of early life exposure adjustment factors (*Supplemental Guidance for Assessing*

[7] OEHHA Reference Exposure Levels (RELs) are updated regularly at www.oehha.ca.gov/air/Allrels.html

[8] CPF and slope factors are built into the HARP2 model used for quantifying risk.

Susceptibility from Early-Life Exposure to Carcinogens, EPA/630/R-003F) and standardized dose algorithms contained in the current OEHHA guidance.

Each age group has different exposure parameters which require cancer risk to be calculated separately for each age group. The estimation of cancer risk uses the following algorithms:

Risk = Dose inhalation × Inhalation CPF × ASF (Equation 1)

Where:

Dose inhalation = CAIR × DBR × A × EF × ED × FAH / AT (Equation 2)

Inhalation CPF = inhalation cancer potency factor

ASF = age-sensitivity factor

Where:

CAIR = concentration of compound in air in micrograms per cubic meter ($\mu g/m^3$)

DBR = breathing rate in liter per kilogram of body weight per day (L/kg-body weighty/day)

A = inhalation absorption factor (1 for DPM)

EF = exposure frequency in days per year

ED = exposure duration in years

FAH = fraction of time at home

AT = time period over which exposure is averaged in days

OEHHA recommended values for the above equations were used in the Construction HRA (OEHHA 2015). Specific modeling details as well as risk for all receptors are included in Appendix B.

Additionally, cancer burden (the number of excess cancer cases that could occur in the given population) was estimated based on AERMOD results and the population density of the surrounding area using SCAQMD guidance (SCAQMD 2024). Calculations are included in Appendix B.

Non-cancer Risk Analysis

Non-cancer chronic impacts were assessed based on modeling the hazard index at sensitive receptor locations. The chronic hazard index is based on the maximum annual TAC emissions over a 12-month period of construction activity. The chronic hazard index is calculated by dividing the maximum modeled annual average concentration at the most impacted sensitive receptor by the recommended exposure limit. The recommended exposure limit is the concentration at or below which no adverse health effects are anticipated. For example, OEHHA has recommended an ambient concentration of 5 $\mu g/m^3$ as the chronic inhalation recommended exposure limit for DPM exhaust (OEHHA 2015). Therefore, a sensitive receptor exposed to an annual average DPM concentration of 5 $\mu g/m^3$ or less would not experience a chronic impact.

Non-cancer chronic impacts affect specific target organ systems (also called toxicological endpoints), such as the eye, nervous system, reproductive system, and respiratory system. The

chronic health impact with the maximum hazard index is used for impact determination. Acute health risk was not quantified because there is no acute risk associated with DPM exposure.

Operational Toxic Air Contaminant Emissions

Health impacts from TAC emissions produced during the operational phase of the proposed Project could result from the use of on-site diesel equipment, such as the standby generator. However, the health risks associated with the operation of the proposed standby generator are anticipated to be equal to or less than the risks generated by the existing standby generator because the frequency of routine testing and maintenance activities for the proposed standby generator would remain the same as under existing conditions. Therefore, operational health risks are addressed qualitatively in this analysis.

4.2 Significance Thresholds

Air Quality

The following thresholds from Appendix G of the California Environmental Quality Act (CEQA) Guidelines that pertain to air quality impacts were used to evaluate the proposed Project. Based on these criteria, the proposed Project would have a significant impact with respect to air quality if it would:

1. Conflict with or obstruct implementation of the applicable air quality plan;
2. Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard;
3. Expose sensitive receptors to substantial pollutant concentrations; or
4. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

Metropolitan has not developed specific air quality thresholds for air quality impacts. However, Appendix G of the CEQA Guidelines states the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the determinations. As such, the significance thresholds and analysis methodologies in the SCAQMD's guidance documents will be used in evaluating air quality impacts, including the following:

- SCAQMD (1993) CEQA Air Quality Handbook (currently being updated) and supplemental guidance
- SCAQMD (2008) Final Localized Significance Threshold Methodology
- SCAQMD (2019) South Coast AQMD Air Quality Significance Thresholds

The following subsections discuss the significance criteria established by SCAQMD to make the determinations for thresholds 1 through 3.

Consistency with Applicable Air Quality Plan

Based on SCAQMD guidance (SCAQMD 1993), consistency with the AQMP is determined based on the following two criteria:

- Whether the proposed Project would result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP
- Whether the proposed Project would exceed the growth assumptions in the AQMP

Regional Significance Thresholds

Table 5 presents the significance criteria established by SCAQMD to evaluate a project's potential to result in a cumulatively considerable net increase of criteria pollutants for which the SCAB is nonattainment under federal and state ambient air quality standards during construction and operation.

Table 5 SCAQMD Regional Air Quality Significance Thresholds

	Mass Daily Emissions Thresholds (pounds per day)	
Pollutant	**Construction**	**Operation**
Volatile Organic Compounds (VOC)	75	55
Nitrogen Oxides (NO_X)	100	55
Carbon Monoxide (CO)	550	550
Sulfur Oxides (SO_X)	150	150
Respirable Particulate Matter (PM_{10})	150	150
Fine Particulate Matter ($PM_{2.5}$)	55	55
Lead[1]	3	3

[1] Because the proposed Project would not involve the development of any major lead emissions sources; lead emissions are not analyzed in this report.

Source: SCAQMD 2023

Localized Significance Thresholds

SCAQMD has also developed Localized Significance Thresholds (LST) as a tool to assist lead agencies in analyzing localized air quality impacts to sensitive receptors in the vicinity of a project. The SCAQMD's LST Methodology outlines how to analyze localized impacts from common pollutants of concern including nitrogen dioxide, carbon monoxide, PM_{10}, and $PM_{2.5}$ (SCAQMD 2008a). LSTs represent the maximum emissions from a project that will not cause or contribute to an air quality exceedance of the most applicable NAAQS or CAAQS at the nearest sensitive receptor. LSTs have been developed for emissions generated in construction areas up to five acres in size. However, LSTs only apply to emissions in a fixed stationary location and are not applicable to mobile sources, such as cars on a roadway.

To minimize efforts, the SCAQMD developed mass rate lookup tables as a simple screening procedure. If a project's on-site emissions do not exceed the screening levels for any pollutant, it can be concluded the project would not cause or contribute to an adverse localized air quality impact. Screening levels are provided for various distances between the project boundary and the nearest sensitive receptor and various project site acreages. Screening levels increase as the distance between the project boundary and the nearest receiver increases because air pollutant

dispersion increases with distance. Screening levels also increase as the project site acreage increases because the distance between construction and operation sources and sensitive receptors increases with project acreage.

The LST mass rate lookup tables account for ambient pollutant concentrations based on the SRA in which a project site is located. The LST methodology includes screening levels for one-, two-, and five-acre sites at distances of 82 feet (25 meters), 164 feet (50 meters), 328 feet (100 meters), 656 feet (200 meters), 1,640 feet (500 meters).

The Project site is in SRA 11 (South San Gabriel Valley). Emissions were evaluated against the most stringent LST screening level distance. Emission thresholds for a one- and five-acre site at a distance of between 82 feet (25 meters) and 382 feet (100 meters) were used in the analysis for carbon monoxide, PM_{10}, and $PM_{2.5}$. The screening thresholds are used since it is assumed less than 10 acres would be disturbed per day during construction. Applicable LST screening levels are shown in Table 6.

Table 6 SCAQMD Localized Significance Threshold Screening Levels

	Mass Daily On-site Emissions Thresholds (pounds per day)					
	1 acre			5 acres		
Pollutant	25 meters	50 meters	100 meters	25 meters	50 meters	100 meters
NO_X/NO_2	83	84	96	183	176	184
CO	673	760	1,113	1,814	1,984	2,549
PM_{10}	5	13	29	14	43	59
$PM_{2.5}$	4	5	9	9	12	19

NO_X/NO_2 = nitrogen oxides; CO = carbon monoxide; PM_{10} = particulate matter 10 micrometers in diameter or less; $PM_{2.5}$ = fine particulate matter 2.5 micrometers in diameter or less

Source: SCAQMD 2009

Toxic Air Contaminant Emissions

SCAQMD has developed significance thresholds for TAC emissions based on health risks associated with elevated exposure to such compounds. For carcinogenic compounds, cancer risk is assessed in terms of incremental excess cancer risk (i.e., the additional cancer risk created by a project above the existing background cancer risk, evaluated at the level of an individual person) and cancer burden (i.e., the increase in the occurrence of cancer cases created by a project, evaluated at the population-level). A project would have the potential to result in a significant impact if it would generate an incremental excess cancer risk of 10 cases in one million persons (1×10^{-6}) or a cancer burden of 0.5 excess cancer cases in areas where cancer risk exceeds one in one million. Additionally, non-carcinogenic health risks are assessed in terms of a hazard index. A hazard index is the potential for non-cancer health effects to occur as a result of exposure to TACs. A project would have the potential to result in a significant impact if it would result in a chronic and/or acute hazard index greater than 1.0 (SCAQMD 2023).

Greenhouse Gas Emissions

The following thresholds from Appendix G of the California Environmental Quality Act (CEQA) Guidelines that pertain to GHG emissions impacts were used to evaluate the proposed Project. Based on these criteria, the proposed Project would have a significant impact with respect to GHG emissions if it would:

- Generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment; or
- Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing GHG emissions.

As outlined in Section 1.1 of Metropolitan's CAP, the CAP is compliant with the requirements of CEQA Guidelines Section 15183.5(b)(1) for a qualified GHG emissions reduction plan (Metropolitan, 2022). Therefore, Metropolitan can streamline the CEQA review of its projects using the GHG emissions analysis completed for the CAP in its Program EIR if the project's emissions are within Metropolitan's carbon budget and the project incorporates all applicable measures from the CAP. This analysis utilizes the streamlining provisions of CEQA Guidelines Section 15183.5(b)(1) to evaluate the significance of the proposed Project's GHG emissions by determining whether the proposed Project would be consistent with the CAP.

5 Air Quality Impact Analysis

Threshold AQ-1:	Would the Project conflict with or obstruct implementation of the applicable air quality plan?

Impact AQ-1 THE PROJECT WOULD POTENTIALLY CONFLICT WITH OR OBSTRUCT IMPLEMENTATION OF THE 2022 AQMP. IMPLEMENTATION OF MEASURE AQ-1 IS RECOMMENDED TO ACHIEVE CONSISTENCY WITH THE 2022 AQMP.

The Project site is within the SCAB, which falls in the jurisdiction of the SCAQMD; therefore, the applicable air quality plan is SCAQMD's 2022 AQMP. Pursuant to SCAQMD guidance, the consistency of proposed Project with the SCAQMD 2022 AQMP is evaluated based on the two criteria established by the SCAQMD *CEQA Air Quality Handbook* (SCAQMD 1993):

1. Whether the proposed Project would result in an increase in the frequency or severity of existing air quality violations or cause or contribute to new violations or delay the timely attainment of air quality standards or the interim emissions reductions specified in the AQMP
2. Whether the proposed Project would exceed the growth assumptions in the AQMP

Violations of federal and state air quality standards would occur if the proposed Project would generate emissions in excess of SCAQMD regional or LSTs set forth in Table 5 and Table 6. As shown in Table 7 under Threshold AQ-2, Phase 1 construction activities would generate NO_X emissions that would exceed the SCAQMD regional threshold. Construction activities during Phases 2 and 3 as well as Project operation would not generate emissions in excess of SCAQMD regional thresholds. However, because of the exceedance of the SCAQMD regional threshold for NO_X during Phase 1 construction activities, the Project has a high potential to result in an increase in frequency or severity of existing air quality violations, cause or contribute to a new violation, or delay timely attainment of the air quality standards in the AQMP pursuant to criterion #1.

The Project site is located in an urban area, and it is likely construction workers for the proposed Project would be sourced from the existing, regional workforce and would not indirectly result in the relocation of people to Los Angeles County. The proposed Project would not involve additional housing, require new employees, or result in additional water supplies; therefore, the proposed Project would not directly or indirectly result in population growth. The proposed Project also would not require zone changes, conditional uses, or entitlements that would modify the existing zoning or land use designations of the Project site, which was used, in part, to develop 2022 AQMP growth assumptions and emission inventories. Therefore, the proposed Project would not generate new growth that would conflict with or obstruct implementation of the 2022 AQMP pursuant to criterion #2.

In light of the above discussion, the proposed Project has a high potential to conflict with or obstruct implementation of the 2022 AQMP pursuant to criterion #1, and implementation of the following measure, AQ-1, is recommended.

Recommended Measure

Measure AQ-1 Construction Equipment

During Project construction activities, the Construction Contractor should implement the following NO_X reduction measures:

- All off-road diesel-fueled construction equipment greater than 25 horsepower should be compliant with federally mandated clean diesel engine emissions standards (USEPA Tier 4) or should be alternatively-fueled (e.g., electric); and
- Welders, pressure washers, and portable generators shall be electrically-powered, or electricity shall be pulled from the grid in lieu of using generators.

Significance after Implementation of Recommended Measure

As demonstrated in Table 8 under Threshold AQ-2, implementation of Measure AQ-1 would reduce NO_X emissions during Phase 1 construction activities to below the SCAQMD regional threshold. Therefore, with implementation of Measure AQ-1, the proposed Project would have a low potential to conflict with or obstruct implementation of the 2022 AQMP.

Threshold AQ-2:	Would the Project result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard?

Impact AQ-2 THE PROJECT WOULD POTENTIALLY RESULT IN A CUMULATIVELY CONSIDERABLE NET INCREASE IN OF ANY CRITERIA POLLUTANT FOR WHICH THE PROJECT REGION IS IN NON-ATTAINMENT UNDER AN APPLICABLE FEDERAL OR STATE AMBIENT AIR QUALITY STANDARD. IMPLEMENTATION OF MEASURE AQ-1 IS RECOMMENDED TO REDUCE EMISSIONS BELOW SCAQMD THRESHOLDS.

The SCAB is designated non-attainment (extreme) for 8-hour ozone NAAQS and non-attainment (serious) for the $PM_{2.5}$ NAAQS as well as partial non-attainment for lead for near-source monitors in Los Angeles County. The SCAB is also designated non-attainment for the ozone, PM_{10}, and $PM_{2.5}$ CAAQS (SCAQMD 2018a). The SCAB is designated unclassifiable or in maintenance/attainment for all other federal and State standards.

Regional Construction Emissions

Project construction would involve demolition, site preparation, grading, infrastructure installation, building construction, paving, and architectural coating. Construction of the proposed Project would result in temporary increases in air pollutant emissions from construction equipment operation on site, construction worker vehicle trips to and from the site, and haul trips to transport materials, demolition debris, and soil export to and from the Project site. The nature and magnitude of construction emissions would vary from day to day, depending primarily on the level of activity and the construction equipment in use. Table 7 summarizes the estimated maximum daily regional air pollutant emissions generated during Project construction. As shown therein, emissions generated during Phase 1 construction activities would exceed the SCAQMD regional threshold for NO_X (a precursor to ozone), primarily due to high emissions during the completion of seismic upgrades to the I/O tower, but would not exceed the remaining SCAQMD regional thresholds for criteria air pollutant emissions. Emissions generated during Phases 2 and 3 of construction activities would not exceed SCAQMD regional thresholds for criteria air pollutant

emissions. Because of the exceedance of the SCAQMD threshold for NO_X (a precursor to ozone) during Phase 1 of construction activities, Project construction would have a high potential to result in a cumulatively considerable net increase of criteria pollutants, specifically ozone. Implementation of Measure AQ-1 (outlined under Threshold AQ-1) is recommended to reduce NO_X emissions below the SCAQMD threshold.

Table 7 Proposed Project Regional Construction Criteria Air Pollutant Emissions

	Maximum Emissions (pounds per day)					
Year	**VOC**	**NO_x**	**CO**	**SO_X**	**PM_{10}**	**$PM_{2.5}$**

VOC = volatile organic compounds; NO_X = nitrogen oxide; CO = carbon monoxide; SO_X = sulfur oxide; PM_{10} = particulate matter with a diameter no more than 10 microns; $PM_{2.5}$ = particulate matter with a diameter no more than 2.5 microns

See Appendix A for CalEEMod outputs.

Operational Emissions

Operations and maintenance activities at Garvey Reservoir, including the frequency of staff visits, monthly testing of the standby generator, and water usage in the Administration Building and Water Quality Laboratory would remain the same as existing conditions and would result in no net change in criteria air pollutant emissions once construction activities are completed. Although the proposed pump station would result in a net increase in electricity consumption of approximately 450,000 kWh, air pollutant emissions associated with electricity usage are attributed to power plants themselves rather than individual projects, as discussed in Section 4.1, *Methodology*. Therefore, Project operation would not result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard, and no impact would occur.

Recommended Measure

Refer to Measure AQ-1 outlined under Threshold AQ-1.

Significance after Implementation of Recommended Measure

Table 8 presents estimated regional emissions during Phase 1 of Project construction with implementation of Measure AQ-1. As shown therein, implementation of Measure AQ-1 would reduce NO_X emissions (a precursor to ozone) during Phase 1 construction activities to below the SCAQMD regional threshold. Therefore, with implementation of Measure AQ-1, the proposed Project would have a low potential to result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable federal or state ambient air quality standard (i.e., ozone and $PM_{2.5}$).

Table 8 Proposed Project Regional Construction Criteria Air Pollutant Emissions – Phase 1 with Implementation of Measure AQ-1

See Appendix A for CalEEMod outputs.

Threshold AQ-3:	Would the Project expose sensitive receptors to substantial pollutant concentrations?

Impact AQ-3 THE PROPOSED PROJECT WOULD POTENTIALLY EXPOSE SENSITIVE RECEPTORS TO SUBSTANTIAL TAC CONCENTRATIONS. IMPLEMENTATION OF MEASURE AQ-1 IS RECOMMENDED TO REDUCE EMISSIONS BELOW APPLICABLE THRESHOLDS.

As discussed in Section 2.1, *Air Quality Background*, sensitive receptors in the vicinity of the Project site include residential neighborhoods to the west, north, south, and east; Hillcrest Elementary School to the east across South Orange Avenue; and Garvey Ranch Park to the north.

Localized Construction Emissions

Criteria Air Pollutant Emissions

Construction of the proposed Project would result in temporary increases in local air pollutant concentrations as a result of the use of heavy-duty construction equipment and vehicle trips generated by construction workers and the transport of construction materials, demolition debris, and soil. Particulate matter emissions would primarily result from site preparation and grading activities, and nitrogen dioxide and carbon monoxide emissions would primarily result from the use of construction equipment and truck trips. Construction emissions would vary substantially from day to day, depending on the level of activity, the specific type of operation and, for dust, the prevailing weather conditions.

Table 9 summarizes maximum daily on-site emissions associated with construction of the proposed Project. Because construction activities would be dispersed throughout the approximately 142-acre Project site, maximum on-site emissions from each major construction activity area were estimated at the nearest sensitive receptors to that area during each of the three main construction phases. As shown in Table 9, on-site construction emissions of NO_X, carbon monoxide, and $PM_{2.5}$ would not exceed the SCAQMD LSTs during any phase of construction. However, on-site emissions of PM_{10} would exceed the applicable SCAQMD LSTs during Phase 1 if all Project components are under construction on the same day.[9] Therefore, the proposed Project has high potential to expose sensitive receptors to substantial criteria pollutant concentrations during construction, and implementation of Measure AQ-1 (outlined under Threshold AQ-1) is recommended.

[9] Simultaneous construction of all Project components in Phase 1 on the same day represents a reasonable, worst-case scenario for purposes of this analysis. Although considered a reasonable scenario for this evaluation, it is unlikely to actually occur during Project construction, and localized air pollutant emissions are therefore likely to be lower than those estimated in this report.

Table 9 Proposed Project Localized Criteria Air Pollutant Emissions – Construction

Phase	Maximum On-site Emissions (pounds per day)

Pump Station	3	6	<1	<1
Total Maximum Daily On-site Emissions – Pump Station	**3**	**6**	**<1**	**<1**
Applicable SCAQMD LST (1-Acre Work Site, 25 Meters to Nearest Sensitive Receptor)	83	673	5	4
Threshold Exceeded?	No	No	No	No

NO_X/NO_2 = nitrogen oxides; CO = carbon monoxide; PM_{10} = particulate matter 10 micrometers in diameter or less; $PM_{2.5}$ = particulate matter 2.5 micrometers in diameter or less; SCAQMD = South Coast Air Quality Management District; LST = Localized Significance Threshold

Note: Some numbers may not add up precisely due to rounding considerations.

[1] Estimated total PM_{10} emissions are 4.76 pounds per day, which does not exceed the threshold of 5 pounds per day.

Source: See CalEEMod worksheets in Appendix A.

Fugitive Dust Emissions

Project construction activities would result in temporary generation of fugitive dust emissions, primarily from site preparation and excavation activities, transport of soil, and movement of heavy-duty construction equipment on unpaved surfaces. Construction contractors for the proposed Project would be required to comply with SCAQMD Rule 403. Rule 403 is intended to reduce the amount of particulate matter in the air due to fugitive dust sources by requiring actions to minimize the creation of fugitive dust. Rule 403 includes the following measures and is applicable as necessary to the proposed Project:

- Nontoxic chemical soil stabilizers shall be applied according to manufacturers' specifications to all inactive construction areas (previously graded areas inactive for 10 days or more).
- Active sites shall be watered at least twice daily. Locations where grading is to occur shall be thoroughly watered prior to earthmoving.
- All trucks hauling dirt, sand, soil, or other loose materials shall be covered or have at least 0.6 meter (two feet) of freeboard (vertical space between the top of the load and top of the trailer) maintained in accordance with the requirements of California Vehicle Code Section 23114.

Adherence to the dust suppression requirements included in Rule 403, which are incorporated by reference in Section 01065 of Metropolitan's construction contractor specifications, would minimize the creation of fugitive dust and the associated potential to expose sensitive receptors to

localized fugitive dust emissions. Therefore, Project construction would not expose sensitive receptors to substantial concentrations of fugitive dust emissions, and impacts would be less than significant.

Toxic Air Contaminant Emissions

Construction of the proposed Project would result in temporary increases in local TAC emissions as a result of DPM generated by heavy-duty construction equipment and heavy, diesel-fueled truck trips for transport of demolition debris and soil. Table 10 presents the maximum estimated total cancer and non-cancer risk for the maximum exposed residential receptor of the 468 receptors that were modeled.[10] The cancer and chronic risks shown in Table 10 represent the maximum risk at the location of the maximum exposed residential receptor for each individual project component as well as the maximum combined risk for all activities at the overall maximum exposed residential receptor. As shown in Table 10, the cancer risk from Project construction activities at nearby residential and school receptors (i.e., the additional individual cancer risk created by Project construction activities above the existing background cancer risk) would exceed the SCAQMD threshold of 10 excess cancer cases in one million people. In addition, the maximum chronic hazard index (i.e., the potential for non-cancer health effects to occur as a result of exposure to TACs) would exceed the SCAQMD threshold of 1. [11]

[10] As noted in Section 3.2.2, *Methodology*, school land uses were modeled as residential receptors in addition to residences, which represents a conservative analysis because exposure would be highest at residential receptors due to the extended duration of time people are present at their residences as compared to schools.

[11] The health risk analysis incorporates reasonable, worst-case assumptions related to construction timing, breathing rates, and age of exposed persons. As such, actual health risk exposure for individual persons may be lower than estimated herein based on actual construction timing and the age of exposed persons.

Table 10 Estimated Cancer and Non-cancer Health Risk at Maximum Exposed Residential Receptor – Project Construction[1]

Project Component	Cancer Risk (per million)[1]	Chronic Risk Hazard Quotient[2]
Phases 1 through 3 (Combined Exposure of a Child from 3rd Trimester Fetus to Age 9)		
Reservoir Cover and Liner	2.36	0.01
I/O Tower	10.6	0.12
Junction Structure	28.16	0.57
Facility Electrical Upgrades	20.16	0.39
Standby Generator	16.96	0.30
Surge Tank Telemetry	0.17	0.03
Administration Building and Water Quality Laboratory	8.10	0.25
Miscellaneous Site Upgrades	2.34	0.07
Pump Station	1.12	0.07
Cumulative Risk[3]	**75.92**	**1.44**
Risk Criteria	10 per million	1.0
Exceed Criteria?	Yes	Yes
Phase 3 Only (Exposure of a Child from 3rd Trimester Fetus to Age 2)		
Pump Station	**6.54**	**0.07**
Risk Criteria	10 per million	1.0
Exceed Criteria?	No	No

[1] The maximum exposed residential receptor is a single-family residence located at 1400 South Orange Avenue southeast of the intersection of Tegner Drive and South Orange Avenue in Monterey Park.

The cancer risk sum for construction activities is based on intermittent exposure over a period of nine years. Age groups exposed conservatively include 3rd trimester, 0 to 2 years, and 2 to 16 years. The cancer risk values shown represent the maximum risk to which a receptor in that age group could be exposed during Project construction activities.

[2] The chronic risk hazard quotient is a unitless value that is based on the highest annual concentration, and it is not dependent on age sensitivity factors or age groups.

[3] Cancer and chronic risks associated with construction of each Project component would vary at any given individual receptor based on their distance from the Project component. For each Project component, cancer and chronic risks are reported for the maximum exposed residential receptor for that component. However, construction activities would be dispersed throughout the approximately 142-acre Project site at varying distances from any given individual receptor. Therefore, the estimated maximum cancer and chronic risks for each Project component are not added together because no single individual receptor would be exposed to the maximum risks from all Project components. Instead, the cumulative cancer and chronic risks represent the highest combined risk from all Project construction activities experienced by the overall maximum exposed residential receptor.

Source: Appendices B and C

Cancer burden resulting from Project construction activities within the zone of impact (i.e., the Project-related increase in the population-wide occurrence of cancer cases) would be approximately 0.28 excess cancer cases (Appendix B), which would not exceed the SCAQMD threshold of 0.5.

Because Project construction activities would result in an incremental excess cancer risk and chronic hazard risk in exceedance of SCAQMD thresholds, Project construction has a high potential to expose sensitive receptors to substantial TAC concentrations, and implementation of Measure AQ-1 (outlined under Threshold AQ-1) is recommended.

Localized Operational Emissions

As discussed under Threshold AQ-2, operations and maintenance activities at Garvey Reservoir would remain the same as existing conditions and would result in no net change in criteria air pollutant emissions once construction activities are completed. The proposed Project includes replacement of the existing standby generator with a new standby generator. Standby generators produce localized criteria air pollutant and TAC emissions such as DPM during routine testing and emergency operation. Monthly testing of the standby generator would be conducted at the same frequency as the existing generator and would therefore not result in a net increase in TAC emissions. Pursuant to SCAQMD rules and regulations, including SCAQMD Rule 1401 (New Source Review of Toxic Air Contaminants), Metropolitan would be required to obtain a permit from SCAQMD for the standby generator, which would ensure the generator is constructed and operated in accordance with applicable SCAQMD rules and regulations. Additionally, the new generator would replace an existing, less efficient generator. Therefore, Project operation would not expose sensitive receptors to substantial pollutant concentrations, and no impact would occur.

Recommended Measure

Refer to Measure AQ-1 outlined under Threshold AQ-1.

Significance after Implementation of Recommended Measure

Table 11 presents estimated localized criteria air pollutant emissions during Project construction with implementation of Measure AQ-1. As shown therein, implementation of Measure AQ-1 would reduce PM_{10} emissions during sitewide Phase 1 construction activities to below the applicable SCAQMD LSTs. In addition, Table 12 shows estimated cancer and non-cancer health risks at the maximum exposed residential receptor resulting from Project construction with implementation of Measure AQ-1. As shown therein, implementation of Measure AQ-1 would reduce cancer and non-cancer health risk associated with Project construction activities to below SCAQMD thresholds. Therefore, with implementation of Measure AQ-1, the proposed Project would have a low potential to expose sensitive receptors to substantial pollutant concentrations.

Table 11 Proposed Project Mitigated Localized Criteria Air Pollutant Emissions - Construction

Phase	Maximum On-site Emissions (lbs/day)[1]			
	NO_X/NO_2	CO	PM_{10}	$PM_{2.5}$

[1] The maximum exposed residential receptor is a single-family residence located at 1400 South Orange Avenue, southeast of the intersection of Tegner Drive and South Orange Avenue in Monterey Park.

The cancer risk sum for construction activities is based on intermittent exposure over a period of nine years. Age groups exposed conservatively include 3rd trimester, 0 to 2 years, and 2 to 16 years. The cancer risk values shown represent the maximum risk to which a receptor in that age group could be exposed during Project construction activities.

[2] The chronic risk hazard quotient is a unitless value that is based on the highest annual concentration, and it is not dependent on age sensitivity factors or age groups.

Source: Appendices B and C

Threshold AQ-4: Would the Project result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Impact AQ-4 THE PROPOSED PROJECT WOULD NOT RESULT IN OTHER EMISSIONS (SUCH AS THOSE LEADING TO ODORS) ADVERSELY AFFECTING A SUBSTANTIAL NUMBER OF PEOPLE.

The Project would generate oil and diesel fuel odors during construction from equipment use as well as odors related to asphalt paving. The odors would be limited to the construction period and would be intermittent and temporary. Furthermore, these odors would dissipate rapidly with distance from in-use construction equipment. Accordingly, Project construction would have a low potential to result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

The proposed Project does not include components with the potential to generate other emissions, such as those leading to odors, during operation. Therefore, Project operation would have no potential to result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.

6 Greenhouse Gas Impact Analysis

Threshold GHG-1: Would the Project generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Impact GHG-1 THE PROPOSED PROJECT WOULD NOT GENERATE GHG EMISSIONS, EITHER DIRECTLY OR INDIRECTLY, THAT MAY HAVE A SIGNIFICANT IMPACT ON THE ENVIRONMENT.

As outlined in Section 1.1 of Metropolitan's CAP, the CAP meets the requirements of CEQA Guidelines Section 15183.5(b)(1) for a qualified GHG emissions reduction plan (Metropolitan 2022). As a result, pursuant to CEQA Guidelines Section 15064.4, 15183.5(a), and 15183.5(b), Metropolitan can streamline the CEQA review of its projects using the GHG emissions analysis completed for the CAP if the proposed Project is consistent with the adopted CAP. Therefore, this analysis relies on the streamlining provisions of CEQA Guidelines Section 15183.5 to determine whether the Project would generate GHG emissions that may have a significant impact on the environment by evaluating whether the Project would be consistent with the CAP. The Project would be consistent with the CAP if the Project emissions are within Metropolitan's carbon budget and the Project incorporates all applicable reduction measures from the CAP.

Construction Emissions

Construction of the proposed Project would result in temporary increases in GHG emissions as a result of the use of heavy-duty construction equipment and vehicle trips generated by construction workers and the transport of construction materials, demolition debris, and soil. Estimated GHG emissions generated during Project construction are shown in Table 13. As shown therein, GHG emissions during Project construction would be highest during the completion of seismic upgrades to the I/O tower. In total, Project construction would generate approximately 3,932 MT of CO_2e, or approximately 131 MT of CO_2e when amortized over a 30-year period pursuant to SCAQMD guidance.

Table 13 Estimated GHG Emissions – Project Construction

Project Component	Emissions (MT of CO_2e per year)
Reservoir Cover and Liner	1,054
I/O Tower	1,044
Junction Structure	337
Facility Electrical Upgrades	300
Standby Generator	394
Surge Tank Telemetry	97
Administration Building and Water Quality Laboratory	304
Miscellaneous Site Upgrades	241
Pump Station	161
Total Construction Emissions	3,932
Annual Construction Emissions (amortized over 30 years)	131

MT = metric tons; CO_2e = carbon dioxide equivalents

[1] SCAQMD recommends amortizing construction emissions over the lifetime of a project, typically defined as 30 years, and adding the amortized construction emissions to operational emissions to estimate annual emissions

See Appendix A for CalEEMod outputs.

Combined Construction and Operational Emissions

Operations and maintenance activities (e.g., frequency of staff visits, standby generator testing, water usage in Administration Building/Water Quality Laboratory) would remain the same as existing conditions under the proposed Project after completion of construction. Therefore, the only source of net new GHG emissions associated with the proposed Project is the anticipated increase in electricity consumption due to installation of the proposed pump station. Estimated GHG emissions generated during Project operation are shown in Table 14. To obtain an estimate of total annual GHG emissions associated with the proposed Project, annual operational emissions were added to amortized construction emissions pursuant to SCAQMD guidance. As shown in Table 14, the proposed Project would generate approximately 240 MT of CO_2e per year in total.

Table 14 Estimated GHG Emissions – Project Operation with Amortized Construction Emissions

Emission Sources	GHG Emissions (MT of CO_2e per year)
Energy Consumption	109
Total Operational Emissions	109
Amortized Construction Emissions[1]	131
Total Emissions (Annual Construction [amortized] + Annual Operational	240

MT = metric tons; CO2e = carbon dioxide equivalents

[6] See Table 13. SCAQMD recommends amortization of construction emissions over the lifetime of a project, typically defined as 30 years, and adding the amortized construction emissions to operational emissions to estimate yearly emissions. Operational emissions are not amortized because these emissions are already estimated on a yearly basis

See Appendix A for CalEEMod outputs.

The proposed Project includes sustainability features that would reduce GHG emissions below the conservative GHG emissions estimate provided in Table 14. These design features include, but are not limited to, installing LED lighting in the fixtures along the access bridge to the I/O tower and upgrading the water heater, HVAC system, and other fixtures/appliances in the Administration Building and Water Quality Laboratory to be more energy- and water-efficient.

Summary of Impacts

As noted previously, Metropolitan adopted a CAP to address and mitigate organization-wide GHG emissions associated with construction and operational activities. Metropolitan's annual 2023 CAP Progress Report states approximately 9,252,380 MT of CO_2e remains in the carbon budget for 2022-2045 years (Metropolitan 2024). As shown in Table 14, the proposed Project would generate approximately 240 MT of CO_2e per year in total, or approximately 5,022 MT of CO_2e from the year of Project buildout (2035) through 2045,[12] which is within the remaining quantified carbon budget as of 2022. Pursuant to the annual CAP GHG emissions inventory and reporting procedures, GHG emissions generated by proposed Project activities are tracked as part of Metropolitan's overall carbon budget through data collected from construction contractors, utility and service providers (electricity, natural gas, water, wastewater, and solid waste), and the employee commute survey. In addition, organization-wide CAP measures are being implemented to reduce Metropolitan's GHG emissions over time such that GHG emissions remain within the carbon budget.

[12] 3,932 MT of CO_2e from construction activities + (109 MT of CO_2e per year for electricity consumption * 10 years)

As mentioned previously, the CAP includes a suite of measures to reduce GHG emissions. These measures include conducting studies, enacting administrative policies and programs, upgrading fleet vehicles and deploying alternative fuel technologies, installing battery energy storage systems at specific treatment plants, increasing energy efficiency at pumping plants, incentivizing employees' use of low carbon transportation options, increasing waste diversion, promoting water use efficiency among Metropolitan's customers, and evaluating carbon sequestration opportunities. The majority of reduction measures are intended to be enacted at an organizational level and are not broadly applicable to individual Metropolitan projects. However, the CAP has two measures specifically aimed toward projects associated with buildings, warehouses, and/or facilities. CAP Measure DC-2 involves reducing natural gas emissions through electrification of buildings and equipment (50 percent by 2030 and 100 percent by 2045), and CAP Measure EE-1 involves converting interior and exterior lighting to LED technologies (50 percent by 2030 and 100 percent by 2045). The water heater and HVAC equipment in the Administration Building and Water Quality Laboratory are currently powered by electricity, and the upgraded water heater and HVAC equipment would also be all-electric, consistent with CAP Measure DC-2. In addition, the proposed Project would also incorporate CAP Measure EE-1 by installing exterior LED lighting in the lighting fixtures along the I/O tower access bridge and within the Administration Building and Water Quality Laboratory. As a result, the proposed Project would not conflict with GHG emissions reduction measures listed in the CAP.

In summary, the proposed Project's GHG emissions are within Metropolitan's carbon budget, and the proposed Project incorporates all applicable CAP reduction measures. Therefore, pursuant to CEQA Guidelines Section 15064.4 and 15183.5, the proposed Project would not directly or indirectly generate GHG emissions that may have a significant impact on the environment, and impacts would be less than significant.

Threshold GHG-2: Would the Project conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs?

IMPACT GHG-2 THE PROPOSED PROJECT WOULD NOT CONFLICT WITH AN APPLICABLE PLAN, POLICY, OR REGULATION ADOPTED FOR THE PURPOSE OF REDUCING THE EMISSIONS OF GHGS.

Applicable plans, policies, and regulations consist of Metropolitan's CAP, SB 32, EO B-55-18, the 2022 Scoping Plan, and AB 1279. As discussed under threshold GHG-1, the proposed Project would be consistent with Metropolitan's CAP because 1) estimated GHG emissions generated by proposed Project activities are within Metropolitan's carbon budget and would be tracked as part of Metropolitan's overall carbon budget with organization-wide CAP measures implemented to reduce Metropolitan's GHG emissions over time such that GHG emissions remain within the carbon budget; and 2) the proposed Project would incorporate applicable CAP reduction measures. Also, by being consistent with the CAP, the proposed Project would also be consistent with state GHG emission reduction plans, policies, and regulations, such as the 2022 Scoping Plan, SB 32, EO B-55-18, and AB 1279 because the GHG emission reduction targets established by these plans, laws, and policies are incorporated into and consistent with Metropolitan's GHG emissions reduction targets. Therefore, the proposed Project would not conflict with any applicable plan, policy or regulation of an agency adopted for the purpose of reducing GHG emissions, and no impact would occur.

California Emissions Estimator Model Output Files

Reservoir Cover and Liner

Garvey - Cover and Liner Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

3. Construction Emissions Details

3.1. Demolition (2025) - Unmitigated

3.2. Demolition (2025) - Mitigated

3.3. Demolition (2026) - Unmitigated

3.4. Demolition (2026) - Mitigated

3.5. Infrastructure Installation (2026) - Unmitigated

3.6. Infrastructure Installation (2026) - Mitigated

3.7. Infrastructure Installation (2027) - Unmitigated

3.8. Infrastructure Installation (2027) - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Garvey - Cover and Liner
Construction Start Date	9/30/2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.2
Location	1061 S Orange Ave, Monterey Park, CA 91755, USA
County	Los Angeles-South Coast
City	Monterey Park
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4170
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Other Non-Asphalt Surfaces	43.9	Acre	43.9	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Demolition	Demolition	9/30/2025	2/16/2026	5.00	100	—
Infrastructure Installation	Building Construction	5/8/2026	11/7/2027	5.00	391	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Generator Sets	Diesel	Average	3.00	8.00	14.0	0.74
Demolition	Rubber Tired Loaders	Diesel	Average	1.00	8.00	150	0.36
Demolition	Pressure Washers	Diesel	Average	4.00	8.00	14.0	0.30
Demolition	Rough Terrain Forklifts	Diesel	Average	2.00	8.00	96.0	0.40
Demolition	Sweepers/Scrubbers	Diesel	Average	1.00	4.00	36.0	0.46
Infrastructure Installation	Generator Sets	Diesel	Average	3.00	8.00	14.0	0.74
Infrastructure Installation	Rubber Tired Loaders	Diesel	Average	1.00	8.00	150	0.36
Infrastructure Installation	Pressure Washers	Diesel	Average	4.00	8.00	14.0	0.30
Infrastructure Installation	Rough Terrain Forklifts	Diesel	Average	2.00	8.00	96.0	0.40
Infrastructure Installation	Sweepers/Scrubbers	Diesel	Average	1.00	4.00	36.0	0.46

5.2.2. Mitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Generator Sets	Electric	Average	3.00	8.00	14.0	0.74
Demolition	Rubber Tired Loaders	Diesel	Tier 4 Final	1.00	8.00	150	0.36

Demolition	Pressure Washers	Electric	Average	4.00	8.00	14.0	0.30
Demolition	Rough Terrain Forklifts	Diesel	Tier 4 Final	2.00	8.00	96.0	0.40
Demolition	Sweepers/Scrubbers	Diesel	Tier 4 Final	1.00	4.00	36.0	0.46
Infrastructure Installation	Generator Sets	Electric	Average	3.00	8.00	14.0	0.74
Infrastructure Installation	Rubber Tired Loaders	Diesel	Tier 4 Final	1.00	8.00	150	0.36
Infrastructure Installation	Pressure Washers	Electric	Average	4.00	8.00	14.0	0.30
Infrastructure Installation	Rough Terrain Forklifts	Diesel	Tier 4 Final	2.00	8.00	96.0	0.40
Infrastructure Installation	Sweepers/Scrubbers	Diesel	Tier 4 Final	1.00	4.00	36.0	0.46

5.3. Construction Vehicles

5.3.1. Unmitigated

Phase Name	Trip Type	One-Way Trips per Day	Miles per Trip	Vehicle Mix
Demolition	—	—	—	—
Demolition	Worker	27.5	18.5	LDA,LDT1,LDT2
Demolition	Vendor	0.00	10.2	HHDT,MHDT
Demolition	Hauling	10.0	20.0	HHDT
Demolition	Onsite truck	0.00	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Building Square Footage)	Acres Paved (acres)
Demolition	0.00	5,000	43.0	1,800,000	—

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction

Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Other Non-Asphalt Surfaces	5.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	532	0.03	< 0.005
2026	0.00	532	0.03	< 0.005
2027	0.00	532	0.03	< 0.005

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Garvey - IO tower
Construction Start Date	9/30/2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.2
Location	1061 S Orange Ave, Monterey Park, CA 91755, USA
County	Los Angeles-South Coast
City	Monterey Park
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4170
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Other Non-Asphalt Surfaces	0.15	Acre	0.15	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Infrastructure Installation	Building Construction	11/1/2025	7/31/2026	5.00	195	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Infrastructure Installation	Generator Sets	Diesel	Average	10.0	8.00	14.0	0.74
Infrastructure Installation	Cranes	Diesel	Average	2.00	8.00	367	0.29

Infrastructure Installation	Tractors/Loaders/Backhoes	Diesel	Average	2.00	8.00	84.0	0.37
Infrastructure Installation	Rubber Tired Loaders	Diesel	Average	2.00	8.00	150	0.36
Infrastructure Installation	Bore/Drill Rigs	Diesel	Average	1.00	8.00	83.0	0.50
Infrastructure Installation	Plate Compactors	Diesel	Average	1.00	9.00	8.00	0.43
Infrastructure Installation	Air Compressors	Diesel	Average	5.00	8.00	37.0	0.48
Infrastructure Installation	Rubber Tired Dozers	Diesel	Average	2.00	8.00	367	0.40
Infrastructure Installation	Excavators	Diesel	Average	2.00	8.00	36.0	0.38
Infrastructure Installation	Graders	Diesel	Average	1.00	8.00	148	0.41
Infrastructure Installation	Skid Steer Loaders	Diesel	Average	2.00	8.00	71.0	0.37

5.2.2. Mitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Infrastructure Installation	Generator Sets	Electric	Average	10.0	8.00	14.0	0.74
Infrastructure Installation	Cranes	Diesel	Tier 4 Final	2.00	8.00	367	0.29
Infrastructure Installation	Tractors/Loaders/Backhoes	Diesel	Tier 4 Final	2.00	8.00	84.0	0.37
Infrastructure Installation	Rubber Tired Loaders	Diesel	Tier 4 Final	2.00	8.00	150	0.36
Infrastructure Installation	Bore/Drill Rigs	Diesel	Tier 4 Final	1.00	8.00	83.0	0.50
Infrastructure Installation	Plate Compactors	Diesel	Average	1.00	9.00	8.00	0.43
Infrastructure Installation	Air Compressors	Diesel	Tier 4 Final	5.00	8.00	37.0	0.48
Infrastructure Installation	Rubber Tired Dozers	Diesel	Tier 4 Final	2.00	8.00	367	0.40
Infrastructure Installation	Excavators	Diesel	Tier 4 Final	2.00	8.00	36.0	0.38
Infrastructure Installation	Graders	Diesel	Tier 4 Final	1.00	8.00	148	0.41
Infrastructure Installation	Skid Steer Loaders	Diesel	Tier 4 Final	2.00	8.00	71.0	0.37

5.3. Construction Vehicles

5.3.1. Unmitigated

Phase Name	Trip Type	One-Way Trips per Day	Miles per Trip	Vehicle Mix
Infrastructure Installation	—	—	—	—
Infrastructure Installation	Worker	100	18.5	LDA,LDT1,LDT2
Infrastructure Installation	Vendor	0.00	10.2	HHDT,MHDT
Infrastructure Installation	Hauling	6.00	20.0	HHDT
Infrastructure Installation	Onsite truck	0.00	—	HHDT

5.3.2. Mitigated

Phase Name	Trip Type	One-Way Trips per Day	Miles per Trip	Vehicle Mix
Infrastructure Installation	—	—	—	—
Infrastructure Installation	Worker	100	18.5	LDA,LDT1,LDT2
Infrastructure Installation	Vendor	0.00	10.2	HHDT,MHDT
Infrastructure Installation	Hauling	6.00	20.0	HHDT
Infrastructure Installation	Onsite truck	0.00	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Other Non-Asphalt Surfaces	5.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	532	0.03	< 0.005
2026	0.00	532	0.03	< 0.005

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Garvey - Junction Structure
Construction Start Date	9/30/2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.2
Location	1061 S Orange Ave, Monterey Park, CA 91755, USA
County	Los Angeles-South Coast
City	Monterey Park
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4170
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Other Non-Asphalt Surfaces	0.06	Acre	0.06	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Garvey - Facility Electrical System
Construction Start Date	9/30/2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.2
Location	1061 S Orange Ave, Monterey Park, CA 91755, USA
County	Los Angeles-South Coast
City	Monterey Park
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4170
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.22

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Other Non-Asphalt Surfaces	0.10	Acre	0.10	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Site Prep	0.00	0.00	0.00	0.00	—
Grading	0.00	0.00	0.00	0.00	—
Paving/Site Restoration	0.00	0.00	0.00	0.00	0.10

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction

Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Other Non-Asphalt Surfaces	0.10	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	532	0.03	< 0.005
2026	0.00	532	0.03	< 0.005

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Project Descriptions
Construction: Off-Road Equipment	Based on project information
Construction: Dust From Material Movement	Based on project information
Construction: Paving	No paving phase
Construction: Trips and VMT	Based on project information

Standby Generator

Garvey - Standby Generator Detailed Report

Table of Contents

1. Basic Project Information

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Garvey - Standby Generator
Construction Start Date	9/30/2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.2
Location	1061 S Orange Ave, Monterey Park, CA 91755, USA
County	Los Angeles-South Coast
City	Monterey Park
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4170
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Other Non-Asphalt Surfaces	0.05	Acre	0.05	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Demolition	Demolition	9/1/2025	11/30/2025	5.00	65.0	—
Site Prep	Site Preparation	12/1/2025	1/31/2026	5.00	45.0	—
Grading	Grading	2/1/2026	4/30/2026	5.00	64.0	—
Infrastructure Installation	Building Construction	5/1/2026	12/31/2026	5.00	175	—
Paving/Site Restoration	Paving	1/1/2027	3/31/2027	5.00	64.0	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Excavators	Diesel	Average	1.00	8.00	36.0	0.38
Demolition	Rubber Tired Loaders	Diesel	Average	1.00	8.00	150	0.36
Site Prep	Tractors/Loaders/Backhoes	Diesel	Average	1.00	8.00	84.0	0.37
Site Prep	Rubber Tired Loaders	Diesel	Average	1.00	8.00	150	0.36
Grading	Skid Steer Loaders	Diesel	Average	1.00	8.00	71.0	0.37
Infrastructure Installation	Aerial Lifts	Diesel	Average	2.00	8.00	46.0	0.31
Infrastructure Installation	Air Compressors	Diesel	Average	2.00	8.00	37.0	0.48
Infrastructure Installation	Cranes	Diesel	Average	1.00	8.00	367	0.29

Infrastructure Installation	Forklifts	Diesel	Average	1.00	8.00	82.0	0.20
Infrastructure Installation	Generator Sets	Diesel	Average	3.00	8.00	14.0	0.74
Paving/Site Restoration	Rollers	Diesel	Average	2.00	8.00	50.0	0.38
Paving/Site Restoration	Air Compressors	Diesel	Average	1.00	8.00	50.0	0.48
Paving/Site Restoration	Graders	Diesel	Average	1.00	8.00	148	0.41
Paving/Site Restoration	Rubber Tired Loaders	Diesel	Average	1.00	8.00	150	0.36
Paving/Site Restoration	Paving Equipment	Diesel	Average	1.00	8.00	89.0	0.36
Paving/Site Restoration	Skid Steer Loaders	Diesel	Average	1.00	8.00	71.0	0.37

5.2.2. Mitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Excavators	Diesel	Tier 4 Final	1.00	8.00	36.0	0.38
Demolition	Rubber Tired Loaders	Diesel	Tier 4 Final	1.00	8.00	150	0.36
Site Prep	Tractors/Loaders/Backhoes	Diesel	Tier 4 Final	1.00	8.00	84.0	0.37
Site Prep	Rubber Tired Loaders	Diesel	Tier 4 Final	1.00	8.00	150	0.36
Grading	Skid Steer Loaders	Diesel	Tier 4 Final	1.00	8.00	71.0	0.37
Infrastructure Installation	Aerial Lifts	Diesel	Tier 4 Final	2.00	8.00	46.0	0.31
Infrastructure Installation	Air Compressors	Diesel	Tier 4 Final	2.00	8.00	37.0	0.48
Infrastructure Installation	Cranes	Diesel	Tier 4 Final	1.00	8.00	367	0.29
Infrastructure Installation	Forklifts	Diesel	Tier 4 Final	1.00	8.00	82.0	0.20
Infrastructure Installation	Generator Sets	Electric	Average	3.00	8.00	14.0	0.74
Paving/Site Restoration	Rollers	Diesel	Tier 4 Final	2.00	8.00	50.0	0.38
Paving/Site Restoration	Air Compressors	Diesel	Tier 4 Final	1.00	8.00	50.0	0.48
Paving/Site Restoration	Graders	Diesel	Tier 4 Final	1.00	8.00	148	0.41
Paving/Site Restoration	Rubber Tired Loaders	Diesel	Tier 4 Final	1.00	8.00	150	0.36
Paving/Site Restoration	Paving Equipment	Diesel	Tier 4 Final	1.00	8.00	89.0	0.36

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	—	—
Site Prep	0.00	0.00	0.00	0.00	—
Grading	0.00	0.00	0.00	0.00	—
Paving/Site Restoration	0.00	0.00	0.00	0.00	0.05

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Other Non-Asphalt Surfaces	0.05	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	532	0.03	< 0.005
2026	0.00	532	0.03	< 0.005
2027	0.00	532	0.03	< 0.005

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Garvey - Surge Tank Telemetry
Construction Start Date	9/30/2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.2
Location	1061 S Orange Ave, Monterey Park, CA 91755, USA
County	Los Angeles-South Coast
City	Monterey Park
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4170
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.22

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Other Asphalt Surfaces	0.10	Acre	0.10	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Garvey - Admin Bldg/Water Quality Lab
Construction Start Date	9/30/2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.2
Location	1061 S Orange Ave, Monterey Park, CA 91755, USA
County	Los Angeles-South Coast
City	Monterey Park
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4170
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Other Asphalt Surfaces	0.15	Acre	0.15	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Architectural Coating	—	—	—	—
Architectural Coating	Worker	14.0	18.5	LDA,LDT1,LDT2
Architectural Coating	Vendor	0.00	10.2	HHDT,MHDT
Architectural Coating	Hauling	0.00	20.0	HHDT
Architectural Coating	Onsite truck	0.00	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	0.00	0.00	0.00	0.00	392

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (cy)	Material Exported (cy)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Other Asphalt Surfaces	5.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	532	0.03	< 0.005
2026	0.00	532	0.03	< 0.005

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Project Descriptions
Construction: Off-Road Equipment	Based on project information
Construction: Dust From Material Movement	Based on project information
Construction: Paving	No paving phase
Construction: Trips and VMT	Based on project information

Proposed Pump Station

Garvey - Pump Station Detailed Report

Table of Contents

1. Basic Project Information

1.1. Basic Project Information

1.2. Land Use Types

1.3. User-Selected Emission Reduction Measures by Emissions Sector

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

2.2. Construction Emissions by Year, Unmitigated

2.3. Construction Emissions by Year, Mitigated

2.4. Operations Emissions Compared Against Thresholds

2.5. Operations Emissions by Sector, Unmitigated

2.6. Operations Emissions by Sector, Mitigated

3. Construction Emissions Details

3.1. Site Prep (2034) - Unmitigated

3.2. Site Prep (2034) - Mitigated

3.3. Grading (2034) - Unmitigated

3.4. Grading (2034) - Mitigated

3.5. Infrastructure Installation (2034) - Unmitigated

3.6. Infrastructure Installation (2034) - Mitigated

3.7. Infrastructure Installation (2035) - Unmitigated

3.8.Infrastructure Installation (2035) - Mitigated

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

4.1.2. Mitigated

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

4.2.2. Electricity Emissions By Land Use - Mitigated

5. Activity Data

5.1. Construction Schedule

5.2. Off-Road Equipment

5.2.1. Unmitigated

5.2.2. Mitigated

5.3. Construction Vehicles

5.3.1. Unmitigated

5.3.2. Mitigated

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

5.5. Architectural Coatings

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

5.6.2. Construction Earthmoving Control Strategies

5.7. Construction Paving

5.8. Construction Electricity Consumption and Emissions Factors

5.11. Operational Energy Consumption

5.11.1. Unmitigated

5.11.2. Mitigated

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Garvey - Pump Station
Construction Start Date	1/1/2034
Operational Year	2035
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.2
Location	1061 S Orange Ave, Monterey Park, CA 91755, USA
County	Los Angeles-South Coast
City	Monterey Park
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4170
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description

Other Non-Asphalt Surfaces	1,682	1000sqft	1.00	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

4. Operations Emissions Details

4.1. Mobile Emissions by Land Use

4.1.1. Unmitigated

Mobile source emissions results are presented in Sections 2.6. No further detailed breakdown of emissions is available.

4.1.2. Mitigated

Mobile source emissions results are presented in Sections 2.5. No further detailed breakdown of emissions is available.

4.2. Energy

4.2.1. Electricity Emissions By Land Use - Unmitigated

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

Land Use	TOG	ROG	NOx	CO	SO2	PM10E	PM10D	PM10T	PM2.5E	PM2.5D	PM2.5T	BCO2	NBCO2	CO2T	CH4	N2O	R	CO2e

Site Prep	Onsite truck	0.00	—	HHDT
Grading	—	—	—	—
Grading	Worker	5.00	18.5	LDA,LDT1,LDT2
Grading	Vendor	0.00	10.2	HHDT,MHDT
Grading	Hauling	0.00	20.0	HHDT
Grading	Onsite truck	0.00	—	HHDT

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (sq. ft.)	Acres Paved (acres)
Site Prep	0.00	0.00	0.00	0.00	—
Grading	0.00	0.00	0.00	0.00	—

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Other Non-Asphalt Surfaces	5.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2034	0.00	532	0.03	< 0.005
2035	0.00	532	0.03	< 0.005

5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Other Non-Asphalt Surfaces	450,000	532	0.0330	0.0040	0.00

5.11.2. Mitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Other Non-Asphalt Surfaces	450,000	532	0.0330	0.0040	0.00

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Project Descriptions
Construction: Off-Road Equipment	Based on project information
Construction: Dust From Material Movement	based on project information
Construction: Paving	no paving phase
Construction: Trips and VMT	Project information
Land Use	Site size
Operations: Architectural Coatings	no coating for the pumpstation
Operations: Energy Use	Project Information provided

Miscellaneous Site Upgrades

8. User Changes to Default Data

1. Basic Project Information

1.1. Basic Project Information

Data Field	Value
Project Name	Garvey - Misc Site Upgrades
Construction Start Date	9/30/2025
Lead Agency	—
Land Use Scale	Project/site
Analysis Level for Defaults	County
Windspeed (m/s)	0.50
Precipitation (days)	18.2
Location	1061 S Orange Ave, Monterey Park, CA 91755, USA
County	Los Angeles-South Coast
City	Monterey Park
Air District	South Coast AQMD
Air Basin	South Coast
TAZ	4170
EDFZ	7
Electric Utility	Southern California Edison
Gas Utility	Southern California Gas
App Version	2022.1.1.21

1.2. Land Use Types

Land Use Subtype	Size	Unit	Lot Acreage	Building Area (sq ft)	Landscape Area (sq ft)	Special Landscape Area (sq ft)	Population	Description
Other Asphalt Surfaces	6.00	Acre	6.00	0.00	0.00	0.00	—	—

1.3. User-Selected Emission Reduction Measures by Emissions Sector

Sector	#	Measure Title
Construction	C-1-A	Use Electric or Hybrid Powered Equipment
Construction	C-5	Use Advanced Engine Tiers

2. Emissions Summary

2.1. Construction Emissions Compared Against Thresholds

Criteria Pollutants (lb/day for daily, ton/yr for annual) and GHGs (lb/day for daily, MT/yr for annual)

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Demolition	Demolition	9/1/2025	11/30/2025	5.00	65.0	—
Site Prep	Site Preparation	12/1/2025	1/31/2026	5.00	45.0	—
Grading	Grading	2/1/2026	3/31/2026	5.00	42.0	—
Infrastructure Installation	Building Construction	4/1/2026	9/30/2026	5.00	131	—
Paving/Site Restoration	Paving	10/1/2026	11/30/2026	5.00	43.0	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Excavators	Diesel	Average	1.00	8.00	36.0	0.38
Demolition	Rubber Tired Loaders	Diesel	Average	1.00	8.00	150	0.36
Site Prep	Tractors/Loaders/Backhoes	Diesel	Average	1.00	8.00	84.0	0.37
Site Prep	Rubber Tired Loaders	Diesel	Average	1.00	8.00	150	0.36
Grading	Skid Steer Loaders	Diesel	Average	2.00	8.00	71.0	0.37
Grading	Rubber Tired Dozers	Diesel	Average	1.00	8.00	367	0.40
Grading	Graders	Diesel	Average	1.00	8.00	148	0.41
Grading	Rubber Tired Loaders	Diesel	Average	1.00	8.00	150	0.36
Infrastructure Installation	Forklifts	Diesel	Average	1.00	8.00	82.0	0.20
Infrastructure Installation	Generator Sets	Diesel	Average	3.00	8.00	14.0	0.74
Paving/Site Restoration	Rollers	Diesel	Average	2.00	8.00	50.0	0.38
Paving/Site Restoration	Paving Equipment	Diesel	Average	1.00	8.00	89.0	0.36

Paving/Site Restoration	Skid Steer Loaders	Diesel	Average	2.00	8.00	71.0	0.37

5.2.2. Mitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Excavators	Diesel	Tier 4 Final	1.00	8.00	36.0	0.38
Demolition	Rubber Tired Loaders	Diesel	Tier 4 Final	1.00	8.00	150	0.36
Site Prep	Tractors/Loaders/Backhoes	Diesel	Tier 4 Final	1.00	8.00	84.0	0.37
Site Prep	Rubber Tired Loaders	Diesel	Tier 4 Final	1.00	8.00	150	0.36
Grading	Skid Steer Loaders	Diesel	Average	1.00	8.00	71.0	0.37
Grading	Skid Steer Loaders	Diesel	Tier 4 Final	1.00	8.00	71.0	0.37
Grading	Rubber Tired Dozers	Diesel	Tier 4 Final	1.00	8.00	367	0.40
Grading	Graders	Diesel	Tier 4 Final	1.00	8.00	148	0.41
Grading	Rubber Tired Loaders	Diesel	Tier 4 Final	1.00	8.00	150	0.36
Infrastructure Installation	Forklifts	Diesel	Tier 4 Final	1.00	8.00	82.0	0.20
Infrastructure Installation	Generator Sets	Electric	Average	3.00	8.00	14.0	0.74
Paving/Site Restoration	Rollers	Diesel	Tier 4 Final	2.00	8.00	50.0	0.38
Paving/Site Restoration	Paving Equipment	Diesel	Tier 4 Final	1.00	8.00	89.0	0.36
Paving/Site Restoration	Skid Steer Loaders	Diesel	Average	1.00	8.00	71.0	0.37
Paving/Site Restoration	Skid Steer Loaders	Diesel	Tier 4 Final	1.00	8.00	71.0	0.37

5.3. Construction Vehicles

5.3.1. Unmitigated

Phase Name	Trip Type	One-Way Trips per Day	Miles per Trip	Vehicle Mix
Infrastructure Installation	—	—	—	—
Infrastructure Installation	Worker	100	18.5	LDA,LDT1,LDT2

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Ton of Debris)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	0.00	—
Site Prep	0.00	0.00	0.00	0.00	—
Grading	0.00	0.00	0.00	0.00	—
Paving/Site Restoration	0.00	0.00	0.00	0.00	5.00

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	3	74%	74%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Other Asphalt Surfaces	5.00	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2025	0.00	532	0.03	< 0.005
2026	0.00	532	0.03	< 0.005

8. User Changes to Default Data

Screen	Justification
Construction: Construction Phases	Project Descriptions
Construction: Off-Road Equipment	Based on project information
Construction: Dust From Material Movement	based on project information
Construction: Paving	No paving phase
Construction: Trips and VMT	based on project information

Appendix B

Health Risk Assessment Results

Reservoir Cover and Liner

Garvey Reservoir Rehab - Unmitigated Reservoir Cover and Liner Work

Cancer Risk Summary & Maximum Annual GLC for Chronic Calculations

Cancer Risk Summary

Max Risk: 2.359732

Garvey Reservoir Rehab - Unmitigated Reservoir Cover and Liner Work

Construction Modeling Assumptions

AERMOD Sources

Volume Sources		
Offroad Construction Exhaust		
Release Height	3.66	m
Emissions rate	1	g/s
Init Vert Dimension	3.4	m
Line Volume		
Onroad Hauling Exhaust		
Plume Height	7.315	m
Plume Width	20	m
Release Height	3.66	m
Emissions rate	1	g/s

Meteorology:

SCAQMD	Pico	Rivera	2010 - 2012, 2015 - 2016

SCAQMD Met Data

Garvey Reservoir Rehab - Unmitigated Junction Structure

Construction Modeling Assumptions

AERMOD Sources

Volume Sources		
Offroad Construction Exhaust		
Release Height	3.66	m
Emissions rate	1	g/s
Init Vert Dimension	3.4	m
Line Volume		
Onroad Hauling Exhaust		
Plume Height	7.315	m
Plume Width	20	m
Release Height	3.66	m
Emissions rate	1	g/s

Meteorology:

SCAQMD	Pico	Rivera	2010 - 2012, 2015 - 2016

SCAQMD Met Data

Garvey Reservoir Rehab - Mitigated Junction Structure

Construction Modeling Assumptions

AERMOD Sources

Volume Sources		
Offroad Construction Exhaust		
Release Height	3.66	m
Emissions rate	1	g/s
Init Vert Dimension	3.4	m
Line Volume		
Onroad Hauling Exhaust		
Plume Height	7.315	m
Plume Width	20	m
Release Height	3.66	m
Emissions rate	1	g/s

Meteorology:

SCAQMD	Pico	Rivera	2010 - 2012, 2015 - 2016

SCAQMD Met Data

Garvey Reservoir Rehab - Unmitigated Facility Electrical System

Construction Modeling Assumptions

AERMOD Sources

Volume Sources		
Offroad Construction Exhaust		
Release Height	3.66	m
Emissions rate	1	g/s
Init Vert Dimension	3.4	m
Line Volume		
Onroad Hauling Exhaust		
Plume Height	7.315	m
Plume Width	20	m
Release Height	3.66	m
Emissions rate	1	g/s

Meteorology:

SCAQMD	Pico	Rivera	2010 - 2012, 2015 - 2016

SCAQMD Met Data
